Abstract:

The purpose of the OASIS Product Life Cycle Support (*PLCS*) standard is to establish structured data exchange and sharing capabilities for use by industry to support complex engineered assets throughout their total life cycle. The OASIS Product Life Cycle Support (PLCS) standard is defined by Data Exchange Specifications (*DEX*) that are based upon ISO 10303 (*STEP*) Application Protocol 239 Product Life Cycle Support.

The scope of the information content of ISO 10303-239 covers:

- The identification and composition of a product design from a support viewpoint;
- The definition of documents and their applicability to products and support activities;
- The identification and composition of individual products;
- Configuration management activities, over the complete life cycle;
- Activities required to sustain product function;
- The resources needed to perform such activities;
- The planning and scheduling of such activities;
- The capture of feedback on the performance of such activities, including the resources used;
- The capture of feedback on the usage and condition of a product;
- The definition of the support environment in terms of people, organizations, skills, experience and facilities.

The business goals of the OASIS PLCS DEXs are to satisfy three significant requirements for owners/operators of complex products and systems such as aircraft, ships and power plants, namely:

- Reduction in the total cost of ownership;
- Increased asset availability;
- Effective information management throughout the product lifecycle.

Status:

This document was last revised or approved by the OASIS Product Life Cycle Support (PLCS) TC on the above date. The level of approval is also listed above. Check the Latest version location noted above for possible later revisions of this document.

Technical Committee members should send comments on this specification to the Technical Committees email list. Others should send comments to the Technical Committee by using the [Send A Comment](#) button on the Technical Committees web page at <http://www.oasis-open.org/committees/plcs/>.

For information on whether any patents have been disclosed that may be essential to implementing this specification, and any offers of patent licensing terms, please refer to the Intellectual Property Rights section of the Technical Committee web page (<http://www.oasis-open.org/committees/plcs/ipr.php>).

1 Introduction

The purpose of the ISO Product Life Cycle Support ([PLCS](#)) standard is to support complex engineered assets such as planes and ships throughout their total life cycle. It puts particular emphasis on the in-service phase of the product and, in particular, it supports the seamless transition from design and manufacture through to product support and feedback of usage and change.

The data needed is often distributed over multiple IT systems and organizations, and historically has been difficult to access and consolidate. The PLCS standard provides a large, integrated information model covering the whole lifecycle. The PLCS standard provides the basic mechanisms enabling neutral file exchanges between IT systems and organisations. This helps remove delays and costs for both the end user of the product and the supplier, and is particularly important for service-based contracts such as "power-by-the-hour".

The PLCS information model is larger than any single existing application, and needs detailed application rules in order to be used uniformly by different users and supported by different software applications. These usage rules cover:

- The subset of the overall information model that needs to be exchanged to meet a particular business objective;
- The data elements that are available to the exchange, selected from the optional data elements in the underlying model;
- Constraints on the population of the model, for example, requiring that a network of subsystems take the form of a tree.

This standard "Product Life Cycle Support Version 1.0" defines how these usage rules are applied to the PLCS information model, as grouped together in Data Exchange Specifications ([DEXs](#)), each of which specify how the PLCS information model is used to directly support real life business processes. It builds the DEXs from reusable components (s) that guarantee uniform interpretation of PLCS between different DEXs, and adds extensible business terminology ([Reference Data](#)) to the model. Each Data Exchange Specification (DEX) provides data exchange and sharing capabilities for a focused set of transactions based upon the integrated data model of ([DEX Application Protocol](#) 239 (Product Life Cycle Support).

Note: No DEXs are included in this version of the standard, "Product Life Cycle Support Version 1.0", but will be included in future releases.

The information content of PLCS covers:

- The identification and composition of a product design from a support viewpoint;
- The definition of documents and their applicability to products and support activities;
- The identification and composition of individual products;
- Configuration management activities, over the complete life cycle;
- Activities required to sustain product function;
- The resources needed to perform such activities;
- The planning and scheduling of such activities;
- The capture of feedback on the performance of such activities, including the resources used;
- The capture of feedback on the usage and condition of a product;
- The definition of the support environment in terms of people, organizations, skills, experience and facilities.

The business goals of the OASIS PLCS DEXs are to satisfy three significant requirements for owners/operators of complex products and systems such as aircraft, ships and power plants, namely:

- Reduction in the total cost of ownership;

-
- Increased asset availability;
 - Effective information management throughout the product lifecycle.

1.1 Terminology

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in [RFC2119].

1.2 Normative References

- [RFC2119] S. Bradner, *Key words for use in RFCs to Indicate Requirement Levels*, <http://www.faqs.org/rfcs/rfc2119.html>, IETF RFC 2119, March 1997.
- [OWL] OWL Web Ontology Language Reference, W3C Recommendation 10 February 2004, <http://www.w3.org/TR/owl-ref>, OWL, 2004.

1.4 Components of the standard

The Product Life Cycle Support Version 1.0 standard comprises the components summarized below.

Note: This front page is provided as a high level summary of the Product Life Cycle Support Version 1.0 standard. The detailed description of the components listed below is provided as a set of HTML pages which should be accessed through a web browser.

- **Contexts:** http://docs.oasis-open.org/plcs/plcslib/v1.0/cs01/sys/context_index_base.html
A *Context* identifies a domain or business purpose area for which DEXs are defined;
- **DEXs:** http://docs.oasis-open.org/plcs/plcslib/v1.0/cs01/sys/dex_index_base.html
A *DEX* identifies and documents a subset of the ISO 10303-239 (PLCS) information model required for a specific business purpose;

Note: No DEXs are included in this version of the standard, "Product Life Cycle Support Version 1.0", but will be included in future releases.

- **Templates:** http://docs.oasis-open.org/plcs/plcslib/v1.0/cs01/sys/template_index_base.html
The usage of the PLCS information model by a DEX is defined through *Templates*. The Templates provide a precise specification of how the model is used to represent a given concept;
- **Model Usage Guides:** http://docs.oasis-open.org/plcs/plcslib/v1.0/cs01/sys/sys/model_ug_index_base.html
Model Usage Guides provide guidance on how the information model and templates should be used.
- **Reference data:** http://docs.oasis-open.org/plcs/plcslib/v1.0/cs01/sys/refdata_index_base.html
Reference Data provides a tailorable vocabulary that adds business specific semantics to the information model.
- **Concept model:** http://docs.oasis-open.org/plcs/plcslib/v1.0/cs01/data/PLCS/concept_model/model_base.html
A high level model of the main concepts used in ISO 10303-239. It is intended to be used to introduce on a single page the scope that PLCS addresses.
- **Activity model:** http://docs.oasis-open.org/plcs/plcslib/v1.0/cs01/sys/activity_model_index_base.html
The ISO 10303-239 Activity Model that illustrates the business activities that are supported by ISO 10303-239;
- **PLCS PSM:** http://docs.oasis-open.org/plcs/plcslib/v1.0/cs01/data/PLCS/psm_model/model_base.html
The PLCS Platform Specific Model (*PLCS PSM*) that is used as the data exchange form for all DEXs. The *PLCS PSM* is a *SysML* model with an derived XML Schema;
For a summary of these components and inter relationships, see [DEX technology overview](#).

2 Conformance

This edition of the OASIS PLCS standardizes the following components:

- The [PLCS Platform Specific Model \(PLCS PSM\)](#) that is used as the data exchange form. The PLCS PSM is represented in EXPRESS, SysML and XML Schema with the XML Schema being derived from the EXPRESS and SysML models.
- [Reference Data](#) that provides a tailorable vocabulary that adds business specific semantics to the information model. The Reference Data is represented in OWL.
- [Templates](#) that provide a precise specification of how the PLCS PSM is used to represent a given concept.

Not every implementation will use all the components.

There are two types of conforming implementations:

- a data exchange XML file and
- a data exchange application.

An implementation is a conforming data exchange file, a PLCS Platform Specific Model data file (a PSM data exchange file), if the file is in accordance with the conditions specified in the following sections. Namely that PSM data exchange file:

1. Conforms to the PLCS Platform Specific Model XML Schemata: [common.xsd](#), [plcs_psm.xsd](#) (Section 2.1);
2. Conforms to the PLCS Platform Specific Model Schematron: [plcs_psm.sch](#) (Section 2.1);
3. Contains references to the OWL classes or objects specified in the following OWL ontologies (Section 2.2):
 - PLCS PSM Reference Data [plcs-psm-en.owl](#)
 - PLCS Reference Data [plcs-rdl-en.owl](#)
4. Is structured according to the patterns specified in the Templates (Section 2.3).

An implementation is a conforming data exchange application that must consume and produce any conforming PSM data exchange file.

The following sections describe how the [PLCS PSM](#), [Reference Data](#) and [Templates](#) are used to establish conformance to this standard.

2.1 PLCS Platform Specific Model (PLCS PSM)

The [PLCS Platform Specific Model \(PLCS PSM\)](#) is a specification of the data exchange form.

The PLCS PSM is represented in EXPRESS, SysML and XML Schema with the XML Schema being derived from the EXPRESS and SysML models.

The following models are provided for explanatory purposes:

- PLCS Platform Specific Model [EXPRESS](#);
- PLCS Platform Specific Model canonical [SysML XMI](#).

The PLCS PSM exchange format, to which implementations shall conform, is represented as the following XML Schemata with an associated set of Schematron rules:

- PLCS Platform Specific Model XML Schema: [common.xsd](#), [plcs_psm.xsd](#);
- PLCS Platform Specific Model Schematron: [plcs_psm.sch](#).

An implementation is a conforming data exchange file, a PLCS Platform Specific Model data file (a PSM data exchange file) that:

- Conforms to the PLCS Platform Specific Model XML Schemata: [common.xsd](#), [plcs_psm.xsd](#);
- Conforms to the PLCS Platform Specific Model Schematron: [plcs_psm.sch](#).

An implementation is a conforming data exchange application that must consume and produce any conforming PSM data exchange file.

2.2 Reference Data Ontologies

Reference Data provides a tailorable vocabulary that adds business specific semantics to the by [PLCS Platform Specific Model](#).

The Reference Data is represented in OWL.

An implementation is a conforming data exchange file, a PLCS Platform Specific Model data file (a PSM data exchange file) that:

- Conforms to the PLCS Platform Specific Model XML Schemata: [common.xsd](#), [plcs_psm.xsd](#); (Section 2.1)
- Conforms to the PLCS Platform Specific Model Schematron: [plcs_psm.sch](#) (Section 2.1);

The PSM data exchange file may contain references to OWL classes or objects. When such references occur they must refer to OWL classes or objects in the following OWL ontologies:

- PLCS PSM Reference Data [plcs-psm-en.owl](#)
- PLCS Reference Data [plcs-rdl-en.owl](#)

An implementation is a conforming data exchange application that must consume and produce any conforming PSM data exchange file.

2.3 PLCS Templates

The usage of the PLCS information model by a [DEX](#) is defined through *Templates*. The Templates provide a precise specification of how the [PLCS Platform Specific Model](#) is used to represent a given concept.

Implementations shall conform to the specific Templates used.

An implementation is a conforming data exchange file, a PLCS Platform Specific Model data file (a PSM data exchange file) that:

1. Conforms to the PLCS Platform Specific Model XML Schemata: [common.xsd](#), [plcs_psm.xsd](#); (Section 2.1)
2. Conforms to the PLCS Platform Specific Model Schematron: [plcs_psm.sch](#) (Section 2.1);
3. Where PSM contains references to OWL classes or objects, such references occur they must refer to OWL classes or objects in the following OWL ontologies:
 - o PLCS PSM Reference Data [plcs-psm-en.owl](#)
 - o PLCS Reference Data [plcs-rdl-en.owl](#)
4. Contains data elements structured according to the patterns specified in the Templates.

The following Templates are standardized:

- Template: ActualActivity
- Template: ActualMission

-
- Template: ActualMissionItem
 - Template: ActualProductUsage
 - Template: Applicability
 - Template: Approval
 - Template: Baseline
 - Template: Breakdown
 - Template: BreakdownElement
 - Template: BreakdownElementRealization
 - Template: BreakdownStructure
 - Template: Catalog
 - Template: CatalogItem
 - Template: CatalogItemRealization
 - Template: CatalogItemStructure
 - Template: Certification
 - Template: ClassCode
 - Template: Classifier
 - Template: Collection
 - Template: Contract
 - Template: DatedEffectivity
 - Template: Descriptor
 - Template: DirectedActivity
 - Template: Document
 - Template: EffectivityAssertion
 - Template: Envelope
 - Template: EnvironmentDefinition
 - Template: EnvironmentObserved
 - Template: EventReport
 - Template: EventReportItem
 - Template: Fleet

 - Template: FunctionalBreakdown
 - Template: FunctionalBreakdownStructure
 - Template: FunctionalElement
 - Template: Identification
 - Template: IndividualCode
 - Template: Justification
 - Template: MeasuredProperty
 - Template: Message
 - Template: Name
 - Template: Observation

-
- Template: Organization
 - Template: Part
 - Template: PartAssembly
 - Template: Person
 - Template: PersonInOrganization
 - Template: PhysicalBreakdown
 - Template: PhysicalBreakdownStructure
 - Template: PhysicalElement
 - Template: PlannedActivity
 - Template: ProductConfiguration
 - Template: ProductConfigurationOptionRelationship
 - Template: ProductConfigurationStructure
 - Template: Project
 - Template: PropertyValueNumeric
 - Template: PropertyValueText
 - Template: ProxyItem
 - Template: RealizedPart
 - Template: RealizedPartAssembly
 - Template: Requirement
 - Template: ResourceOrder
 - Template: ResourceOrderAcknowledgment
 - Template: ResourceOrderDelivery
 - Template: ResourceOrderDeliveryReceipt
 - Template: ResourceOrderLineItem
 - Template: ResourcePool
 - Template: ResourcePoolItem
 - Template: Scheme
 - Template: SchemeEntry
 - Template: StateAssertion
 - Template: StateAssessment
 - Template: StatePrediction
 - Template: StockItem
 - Template: SystemBreakdown
 - Template: SystemBreakdownStructure
 - Template: SystemElement
 - Template: Task
 - Template: ViewDefinitionContext
 - Template: Warranty
 - Template: WorkDone
 - Template: WorkOrder

-
- Template: WorkRequest

Note: Future versions of this standard, "Product Life Cycle Support Version 1.0", will extend the number of DEXs, Templates and Reference Data, as well as other parts to facilitate the adoption of the PLCS standard.
