2 Web Services Resource Properties 1.2 3 (WS-ResourceProperties)

4 OASIS Standard, 1 April 2006

5

6 **Document identifier:**

7 wsrf-ws_resource_properties-1.2-spec-os

8 **Location:**

9 http://docs.oasis-open.org/wsrf/wsrf-ws_resource_properties-1.2-spec-os.pdf

10 **Editors:**

11 Steve Graham, IBM <sgraham@us.ibm.com>

12 Jem Treadwell, Hewlett-Packard Company <Jem.Treadwell@hp.com>

13 **Abstract:**

14 The relationship between Web services and stateful resources is defined in [WS-
15 [Resource](#)] in terms of a WS-Resource which represents the composition of a stateful
16 resource and a Web service.

17 One characteristic of a WS-Resource is the set of properties associated with the
18 resource. This document standardizes the means by which the definition of the properties
19 of a WS-Resource may be declared as part of a Web service interface. The declaration of
20 the WS-Resource's properties represents a projection of or a view on the WS-Resource's
21 state. This projection is defined in terms of a resource properties document. This
22 resource properties document serves to define a basis for access to the resource
23 properties through Web service interfaces.

24 This specification also defines a standard set of message exchanges that allow a
25 requestor to query or update the property values of the WS-Resource. The set of
26 properties defined in the resource properties document associated with the service
27 interface defines the constraints on the valid contents of these message exchanges.

28 **Status:**

29 This document is an OASIS Standard.

30 Committee members should send comments on this specification to the wsrf@lists.oasis-
31 [open.org](http://lists.oasis-open.org) list. Others may submit comments to the TC via the web form found on the TC's
32 web page at <http://www.oasis-open.org/committees/wsrf>. Click the button for "Send A
33 Comment" at the top of the page. Submitted comments (for this work as well as other

34 works of that TC) are publicly archived and can be viewed at <http://lists.oasis-open.org/archives/wsrf-comment/>.
35

36 For information on whether any patents have been disclosed that may be essential to
37 implementing this specification, and any offers of patent licensing terms, please refer to
38 the Intellectual Property Rights section of the WSRF TC web page (<http://www.oasis-open.org/committees/wsrf/>).

93 1 Introduction

94 The relationship between Web services and stateful resources is defined in [WS-Resource] in
95 terms of a WS-Resource which represents the composition of a stateful resource and a Web
96 service as a WS-Resource.

97 One characteristic of a WS-Resource is the set of properties associated with the resource. This
98 specification standardizes the means by which the definition of the properties of a WS-Resource
99 may be declared as part of the Web service interface. The declaration of the WS-Resource's
100 properties represents a projection of or a view on the resource's state. The projection is defined in
101 terms of a resource properties document. This resource properties document serves to define a
102 basis for access to the resource properties through the Web service interface.

103 This specification also defines a standard set of message exchanges that allow a requestor to
104 query or update the resource property values. The set of properties defined in the resource
105 properties document, and associated with the service interface, defines the constraints on the
106 valid contents of these message exchanges.

107 In this document, we outline the goals and requirements for resource properties. We define the
108 means to declare resource properties as part of a Web service description. Following this, we
109 define the message exchanges for querying and updating resource property values. We also
110 define a standard means by which requestors can use WS-Notification to receive notification
111 messages related to changes in resource property values. The document concludes with a
112 discussion of security considerations associated with resource properties. As an appendix, we
113 provide normative XML and WSDL descriptions of resource properties.

114 WS-ResourceProperties is inspired by a portion of the Global Grid Forum's "Open Grid
115 Services Infrastructure (OGSI) Version 1.0" specification [OGSI].

116 1.1 Goals and Requirements

117 The goal of WS-ResourceProperties is to standardize the terminology, concepts, operations,
118 WSDL and XML needed to express the resource properties projection, its association with the
119 Web service interface, and the messages defining the query and update capability against the
120 properties of a WS-Resource.

121 1.1.1 Requirements

122 In meeting this goal, the specification must address the following specific requirements:

123 **This specification MUST:**

- 124 • Define the term "resource property" and its relationship to Web services and WS-Resources.
- 125 • Define the means by which a designer decorates a Web service description with the names
126 and types of properties associated with a WS-Resource.
- 127 • Define the means by which a requestor can:
 - 128 • Retrieve the values of one or more properties of a WS-Resource
 - 129 • Update the values of one or more properties of a WS-Resource
 - 130 • Query across the values of one or more properties of a WS-Resource
 - 131 • Subscribe for notification [WS-BaseNotification] when the value of a WS-Resource
132 property changes.

133 The means by which resource property values are retrieved and updated SHOULD reflect a
134 document-oriented style and MUST provide the means to perform batched query and update
135 operations against the WS-Resource in a single message exchange. This will facilitate improved

136 performance over approaches requiring a separate request message exchange for each
137 individual resource property access.

138 Web services are often described using a collection of message exchange sets (e.g. WSDL 1.1
139 portTypes). These message exchange sets may be aggregated (using manual cut-and-paste in
140 WSDL 1.1) to form the “final” composed interface definition for the Web service. The requestor’s
141 exposure to and interpretation of the Web service interface may be defined by a partial subset of
142 the constituent message exchange sets in the overall interface composition. Therefore, a
143 requestor will form resource property-related message requests based on this potentially partial
144 understanding of the overall composed interface to the Web service. It MUST be possible for a
145 requestor, having partial knowledge of the composed service interface, to form correct and
146 consistent resource property access message requests that execute properly on a Web service
147 that implements an extended message exchange set.

148 **1.1.2 Non-Goals**

149 The following topics are outside the scope of this specification:
150 General purpose XML document query and update: This specification is not meant to be used for
151 querying and updating generic XML documents, or to be used outside the context of modeling
152 stateful resources with Web services.

153 **1.2 Notational Conventions**

154 The keywords "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD",
155 "SHOULD NOT", "RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be
156 interpreted as described in [RFC2119].

157 When describing abstract data models, this specification uses the notational convention used by
158 the [XML InfoSet]. Specifically, abstract property names always appear in square brackets (e.g.,
159 [some property]).

160 This specification uses a notational convention, referred to as “Pseudo-schemas” in a fashion
161 similar to the WSDL 2.0 Part 1 specification [WSDL 2.0]. A Pseudo-schema uses a BNF-style
162 convention to describe attributes and elements:

- 163 • ‘?’ denotes optionality (i.e. zero or one occurrences),
- 164 • ‘*’ denotes zero or more occurrences,
- 165 • ‘+’ denotes one or more occurrences,
- 166 • '[' and ']' are used to form groups,
- 167 • ‘/’ represents choice.

168 Attributes are conventionally assigned a value which corresponds to their type, as defined in the
169 normative schema.

```
170 <!-- sample pseudo-schema -->
171 <element
172   required_attribute_of_type_QName="xs:QName"
173   optional_attribute_of_type_string="xs:string"? >
174   <required_element />
175   <optional_element />?
176   <one_or_more_of_these_elements />+
177   [ <choice_1 /> | <choice_2 /> ]*
178 </element>
```

179 Where there is disagreement between the separate XML schema and WSDL files describing the
180 messages defined by this specification and the normative descriptive text (excluding any pseudo-

181 schema) in this document, the normative descriptive text will take precedence over the separate
182 files. The separate files take precedence over any pseudo-schema and over any schema and
183 WSDL included in the appendices.

184 **1.3 Namespaces**

185 The following namespaces are used in this document:

Prefix	Namespace
s11	http://schemas.xmlsoap.org/soap/envelope/
xsd	http://www.w3.org/2001/XMLSchema
wsa	http://www.w3.org/2005/08/addressing
wsnt	http://docs.oasis-open.org/wsn/b-2
wsrf-rp	http://docs.oasis-open.org/wsrf/rp-2
wsrf-rpw	http://docs.oasis-open.org/wsrf/rpw-2
wsrf-bf	http://docs.oasis-open.org/wsrf/bf-2
wsrf-rw	http://docs.oasis-open.org/wsrf/rw-2

186 **1.4 Fault Definitions**

187 All faults generated by a WS-Resource SHOULD be compliant with the WS-BaseFaults [[WS-BaseFaults](#)]
188 specification.

189 All faults defined by this specification MUST use the following wsa:Action URI [[WS-Addressing](#)]:
190 <http://docs.oasis-open.org/wsrf/fault>.

191 2 Terminology and Concepts

192 The following definitions outline the terminology and usage in this specification. This section gives
193 only brief description of these terms.

194 Resource Property:

- 195 • A resource property is a piece of information defined as part of the state model of a WS-
196 Resource.
- 197 • A resource property may reflect a part of the resource's state, meta-data, manageability
198 information, etc.

199 Resource Properties Document:

- 200 • The XML document representing a logical composition of resource property elements.
201 The resource properties document defines a particular view or projection of the state data
202 implemented by the WS-Resource.
- 203 • The type (e.g. the XML Schema definition of the root element) of a resource properties
204 document is associated with the WSDL portType defining the Web service interface. This
205 association is the basis of the WS-Resource definition. Each instance of a particular WS-
206 Resource type MUST implement a logical resource properties document of the type
207 declared in the WSDL portType.

208 Resource Property Element:

- 209 • The XML representation of a resource property.
- 210 • A resource property element must appear as the immediate child of the root element of a
211 resource properties document.
- 212 • A resource property element must be an XML global element definition (GED), and is
213 uniquely identified by QName.

214 Resource Property Value:

- 215 • The value(s) associated with a resource property.

216 **3 Example**

217 The simple example below defines the GenericDiskDrive portType and the resource properties
218 document associated with GenericDiskDrive. The association of the resource properties
219 document with the portType defines the type of the WS-Resource.

```
220 <wsdl:definitions ... xmlns:tns="http://example.com/diskDrive" ...>
221 ...
222 <wsdl:types>
223   <xsd:schema targetNamespace="http://example.com/diskDrive" ... >
224
225   <!-- Resource property element declarations -->
226   <xsd:element name="NumberOfBlocks" type="xsd:integer"/>
227   <xsd:element name="BlockSize" type="xsd:integer" />
228   <xsd:element name="Manufacturer" type="xsd:string" />
229   <xsd:element name="StorageCapability" type="xsd:string" />
230
231   <!-- Resource properties document declaration -->
232   <xsd:element name="GenericDiskDriveProperties">
233     <xsd:complexType>
234       <xsd:sequence>
235         <xsd:element ref="tns:NumberOfBlocks"/>
236         <xsd:element ref="tns:BlockSize" />
237         <xsd:element ref="tns:Manufacturer" />
238         <xsd:any minOccurs="0" maxOccurs="unbounded" />
239         <xsd:element ref="tns:StorageCapability"
240           minOccurs="0" maxOccurs="unbounded" />
241       </xsd:sequence>
242     </xsd:complexType>
243   </xsd:element>
244 ...
245   </xsd:schema>
246 </wsdl:types>
247 ...
248   <!-- Association of resource properties document to a portType -->
249   <wsdl:portType name="GenericDiskDrive"
250     wsrf-rp:ResourceProperties="tns:GenericDiskDriveProperties" >
251
252     <operation name="start" .../>
253     <operation name="stop" .../>
254 ...
255   </wsdl:portType>
256 ...
257 </wsdl:definitions>
```

258 The following represents the request message used to retrieve three resource property elements
259 from the WS-Resource that implements the GenericDiskDrive portType:

```
260 ...
261   <wsrf-rp:GetMultipleResourceProperties
```

```
262    xmlns:tns="http://example.com/diskdrive" ...>
263    <wsrf-rp:ResourceProperty>
264        tns:NumberOfBlocks
265        </wsrf-rp:ResourceProperty>
266        <wsrf-rp:ResourceProperty>
267            tns:BlockSize
268            </wsrf-rp:ResourceProperty>
269            <wsrf-rp:ResourceProperty>
270                tns:StorageCapability
271                </wsrf-rp:ResourceProperty>
272            </wsrf-rp:GetMultipleResourceProperties>
273            ...
274
```

The following is a sample response to the simple get request:

```
275    ...
276    <wsrf-rp:GetMultipleResourcePropertiesResponse
277        xmlns:ns1="http://example.com/diskdrive"
278        xmlns:ns2="http://example.com/capabilities" ...>
279        <ns1:NumberOfBlocks>22</ns1:NumberOfBlocks>
280        <ns1:BlockSize>1024</ns1:BlockSize>
281        <ns1:StorageCapability>
282            <ns2>NoSinglePointOfFailure>true</ns2>NoSinglePointOfFailure>
283            </ns1:StorageCapability>
284            <ns1:StorageCapability>
285                <ns2>DataRedundancyMax>42</ns2>DataRedundancyMax>
286            </ns1:StorageCapability>
287
288        </wsrf-rp:GetMultipleResourcePropertiesResponse>
289        ...
290
```

290 4 Declaring Resource Properties

291 4.1 Resource Properties Document

292 The resource properties document type associated with a Web service's WSDL 1.1 portType
293 definition provides the declaration of the exposed resource properties of the WS-Resource. It
294 represents a particular composed structural view or projection of the resource properties of the
295 WS-Resource, essentially exposing the stateful resource component within the WS-Resource
296 composition. This may be used by a service requestor to form an XML-based query or update
297 expression on the WS-Resource.

298 This specification does not dictate the means by which a service implements a resource
299 properties document. A given service implementation may choose to realize its implementation of
300 the resource properties document as an actual XML instance document, stored in memory, in the
301 file system, in a database or in some XML Repository. Other service implementations may
302 *dynamically* construct the resource property elements and their values, from data held in
303 programming language objects (such as a J2EE EJB Entity Bean) or by executing a command on
304 a private communications channel to a physical resource. Yet another implementation possibility
305 is a mapping layer to a standard management interface (such as CIM or SNMP).

306 There is an explicit relationship between the resource properties document and the message
307 exchanges defined in Section 5. Any Web service that implements an interface that includes a
308 resource properties document type declaration is a WS-Resource and MUST comply with the
309 definition of a WS-Resource in [WS-Resource]. A WS-Resource MUST accept message requests
310 declared by the GetResourceProperty message exchange defined in Section 5. Similarly, such a
311 Web service MAY accept message requests declared by the other message exchanges defined
312 in Section 5.

313 However, there is no relationship, intended or implied by this specification, between the resource
314 properties defined in the resource properties document and any other message exchanges that
315 may be introduced as part of the Web service interface. Any relationships between the resource
316 properties and messages that comprise an interface are entirely under the purview of the
317 designer of that interface. For example, using the resource properties document described in
318 Section 3, it would be legal for an interface designer to introduce a "ReformatSectorBlock"
319 message exchange. However, with respect to this specification, there is no relationship either
320 required or prohibited between such an operation and the properties declared in the resource
321 properties document.

322 4.2 Resource Properties Document and Resource Properties

323 A *resource properties document* MUST be defined in XML Schema as a global element
324 declaration (GED) in some XML namespace. This GED refers to the definition of the root element
325 of a resource properties document.

326 A resource properties document MAY contain *resource property elements*, also referred to as
327 simply *resource properties*. Resource properties appear as child elements of the root element of
328 a resource properties document. If a resource properties document contains resource properties,
329 its definition MUST be a complexType defining a collection of zero or more child elements, each
330 of these child elements defining a resource property element. Each resource property element
331 MUST be defined in XML Schema as a GED. The complexType defining the resource properties
332 document MAY allow open element content (xsd:any). Resource properties are the atomic unit
333 upon which many of the message exchanges defined in this document operate.

334 **4.3 Declaring the Resource Properties Document Type in WSDL**

335 The resource properties document definition is associated with a Web service WSDL 1.1
336 portType in the following manner:

```
337 <wsdl:definitions ...>
338   <wsdl:portType ...
339     wsrf-rp:ResourceProperties="xsd:QName"? ... >
340     ...
341   </wsdl:portType>
```

342 This definition is further constrained as follows:

343 /wsdl:portType/@wsrf-rp:ResourceProperties

344 If this attribute appears on a WSDL 1.1 portType element (using attribute extensibility
345 available in the WSDL 1.1 XML schema definition for the portType element) its value
346 MUST be a QName referring to a resource properties document as defined in Section
347 4.2.

348 Any service that implements a portType annotated with @wsrf-rp:ResourceProperties MUST be a
349 component of a WS-Resource and MUST provide the interface to resource properties via a
350 document whose root element is defined by the XML global element declaration associated with
351 the portType.

352 5 Operations on Resource Properties

353 This section defines a collection of message exchanges that standardize the means by which a
354 requestor can retrieve values of resource properties, update values of resource properties, and
355 issue queries against resource properties.

356 Any interface that includes a resource properties document type declaration
357 (/wsdl:portType/@ResourceProperties) MUST also include the GetResourceProperty message
358 exchange (operation) defined in this section. Any Web service that implements an interface that
359 includes a resource properties document type declaration MAY also support the other message
360 exchanges defined in this section.

361 5.1 GetResourcePropertyDocument

362 A WS-Resource MAY support the message exchange defined in this section that allows a

363 requestor to retrieve the values of all resource properties associated with the WS-Resource.

364 The format of this request message MUST be:

```
365 <wsrf-rp:GetResourcePropertyDocument />
```

366 The wsa:Action MUST contain the URI

```
367     http://docs.oasis-open.org/wsrf/rpw-
368     2/GetResourcePropertyDocument/GetResourcePropertyDocumentRequest.
```

369 The response of the GetResourcePropertyDocument request message is a message of the
370 following form:

```
371 <wsrf-rp:GetResourcePropertyDocumentResponse>
372   {any}
373 </wsrf-rp:GetResourcePropertyDocumentResponse>
```

374 The wsa:Action MUST contain the URI

```
375     http://docs.oasis-open.org/wsrf/rpw-
376     2/GetResourcePropertyDocument/GetResourcePropertyDocumentResponse.
```

377 The contents of the GetResourcePropertyDocumentResponse message are further described as
378 follows:

```
379 /wsrf-rp:GetResourcePropertyDocumentResponse/{any}
```

380 An XML element that MUST correspond to the resource properties document of the WS-
381 Resource.

382 If the WS-Resource does not respond to the GetResourcePropertyDocument request message
383 with the GetResourcePropertyDocumentResponse message, then it MUST send a fault. This
384 specification does not define any additional faults for this operation other than those defined for
385 all WS-Resources in [WS-Resource]. One of these faults, or a specialization thereof, SHOULD be
386 sent upon failure although other fault messages MAY be returned instead.

387 5.1.1 Example SOAP Encoding of the 388 GetResourcePropertyDocument Message Exchange

389 Consider the following resource properties document defining resource properties for a WS-
390 Resource defined by the GenericDiskDrive portType:

```
391 <tns:GenericDiskDriveProperties
```

```
392     xmlns:tns="http://example.com/diskDrive"
393     xmlns:cap="http://example.com/capabilities">
394     <tns:NumberOfBlocks>22</tns:NumberOfBlocks>
395     <tns:BlockSize>1024</tns:BlockSize>
396     <tns:Manufacturer>DrivesRUs</tns:Manufacturer>
397     <tns:StorageCapability>
398         <cap>NoSinglePointOfFailure>true</cap>NoSinglePointOfFailure>
399         </tns:StorageCapability>
400         <tns:StorageCapability>
401             <cap>DataRedundancyMax>42</cap>DataRedundancyMax>
402             </tns:StorageCapability>
403         </tns:GenericDiskDriveProperties>
```

404 The following is a non-normative example of a GetResourcePropertyDocument request message
405 using SOAP 1.1:

```
406 <s11:Envelope ...>
407     <s11:Header>
408         <wsa:Action>
409         http://docs.oasis-open.org/wsrp/rpw-
410         2/GetResourcePropertyDocument/GetResourcePropertyDocumentRequest
411         </wsa:Action>
412     ...
413     </s11:Header>
414     <s11:Body>
415         <wsrf-rp:GetResourcePropertyDocument/>
416     </s11:Body>
417 </s11:Envelope>
```

418 The following is an example GetResourcePropertyDocumentResponse message using SOAP
419 1.1:

```
420 <s11:Envelope ...>
421     <s11:Header>
422         <wsa:Action>
423         http://docs.oasis-open.org/wsrp/rpw-
424         2/GetResourcePropertyDocument/GetResourcePropertyDocumentResponse
425         </wsa:Action>
426     ...
427     </s11:Header>
428     <s11:Body>
429         <wsrf-rp:GetResourcePropertyDocumentResponse
430             xmlns:tns="http://example.com/diskDrive"
431             xmlns:cap="http://example.com/capabilities">
432             <tns:GenericDiskDriveProperties>
433                 <tns:NumberOfBlocks>22</tns:NumberOfBlocks>
434                 <tns:BlockSize>1024</tns:BlockSize>
435                 <tns:Manufacturer>DrivesRUs</tns:Manufacturer>
436                 <tns:StorageCapability>
437                     <cap>NoSinglePointOfFailure>true</cap>NoSinglePointOfFailure>
438                 </tns:StorageCapability>
```

```
439 <tns:StorageCapability>
440   <cap:DataRedundancyMax>42</cap:DataRedundancyMax>
441   </tns:StorageCapability>
442 </tns:GenericDiskDriveProperties>
443 </wsrf-rp:GetResourcePropertyDocumentResponse>
444 </s11:Body>
445 </s11:Envelope>
```

5.2 GetResourceProperty

446 A WS-Resource whose portType includes the resource properties document type declaration
447 (/wsdl:portType/@ResourceProperties) MUST support the message exchange defined in this
448 section that allows a requestor to retrieve the value of a single resource property of a WS-
449 Resource.

450 The format of this request message MUST be:

```
452
453   <wsrf-rp:GetResourceProperty>
454     QName
455   </wsrf-rp:GetResourceProperty>
456
```

457 The wsa:Action MUST contain the URI

458 <http://docs.oasis-open.org/wsrf/rpw-2/GetResourceProperty/GetResourcePropertyRequest>.

460 The components of the GetResourceProperty request message are further described as follows:

461 /wsrf-rp:GetResourceProperty/QName

462 This MUST correspond to the QName of a resource property element (child of the root of
463 the WS-Resource's resource properties document).

464 The response of the GetResourceProperty request message is a message of the following form:

```
465
466   <wsrf-rp:GetResourcePropertyResponse>
467     {any}*
468   </wsrf-rp:GetResourcePropertyResponse>
469
```

470 The wsa:Action MUST contain the URI

471 <http://docs.oasis-open.org/wsrf/rpw-2/GetResourceProperty/GetResourcePropertyResponse>.

473 The contents of the GetResourceProperty response message are further described as follows:

474 /wsrf-rp:GetResourcePropertyResponse/{any}

475 The resource property value, as XML element(s), that corresponds to the QName in the
476 GetResourceProperty request. Note: in the case where the resource property element is
477 defined with minOccurs="0" and the resource properties document does not contain any
478 value for that resource property, the response MUST be an empty wsrf-
479 rp:GetResourcePropertyResponse element. If an implementation cannot return all of the
480 resource property values associated with the request, due to, for example, security
481 considerations, then it MUST fault.

482 If the WS-Resource does not respond to the GetResourceProperty request message with the
483 GetResourcePropertyResponse message, then it MUST send a fault. This specification defines
484 the following faults associated with failure to process the GetResourceProperty request message,
485 in addition to those faults defined for all WS-Resources in [WS-Resource]:

486 InvalidResourcePropertyNameFault

- 487 • The QName in the request message did not correspond to a resource property element
488 of the WS-Resource referred to in the request message.

489 One of these faults, or a specialization thereof, SHOULD be sent upon failure, although other
490 fault messages MAY be returned instead.

491 **5.2.1 Example SOAP Encoding of the GetResourceProperty Message 492 Exchange**

493 Consider the resource properties document defining resource properties for a WS-Resource as
494 shown in section 5.1.1. The following is a non-normative example of a GetResourceProperty
495 request message using SOAP 1.1:

```
496 <s11:Envelope ...>
497   <s11:Header>
498     <wsa:Action>
499     http://docs.oasis-open.org/wsrf/rpw-2/GetResourceProperty/GetResourcePropertyRequest
500     </wsa:Action>
501   ...
502   </s11:Header>
503   <s11:Body>
504     <wsrf-rp:GetResourceProperty
505       xmlns:tns="http://example.com/diskDrive">
506       tns:NumberOfBlocks
507     </wsrf-rp: GetResourceProperty>
508   </s11:Body>
509 </s11:Envelope>
```

510 The following is an example GetResourcePropertyResponse message using SOAP 1.1:

```
511 <s11:Envelope ...>
512   <s11:Header>
513     <wsa:Action>
514     http://docs.oasis-open.org/wsrf/rpw-2/GetResourceProperty/GetResourcePropertyResponse
515     </wsa:Action>
516   ...
517   </s11:Header>
518   <s11:Body>
519     <wsrf-rp:GetResourcePropertyResponse
520       xmlns:ns1="http://example.com/diskDrive">
521       <ns1:NumberOfBlocks>22</ns1:NumberOfBlocks>
522     </wsrf-rp:GetResourcePropertyResponse>
523   </s11:Body>
524 </s11:Envelope>
```

525 **5.3 GetMultipleResourceProperties**

526 A WS-Resource MAY support the message exchange defined in this section that allows a
527 requestor to retrieve the values of multiple resource properties of a WS-Resource.

528 The format of this request message MUST be:

```
<wsrf-rp:GetMultipleResourceProperties>
  <wsrf-rp:ResourceProperty>QName <wsrf-rp:ResourceProperty>+
</wsrf-rp:GetMultipleResourceProperties>
```

532 The wsa:Action MUST contain the URI

533 http://docs.oasis-open.org/wsrf/rpw-
534 2/GetMultipleResourceProperties/GetMultipleResourcePropertiesRequest.

535 The components of the GetMultipleResourceProperties request message are further described as
536 follows:

537 /wsrf-rp:GetMultipleResourceProperties/wsrf-rp:ResourceProperty+

538 This component MAY appear one or more times. Each ResourceProperty element
539 contains an xsd:QName which MUST correspond to the QName of a resource property
540 element child of the root of the WS-Resource's resource properties document.

541 The response of the GetMultipleResourceProperties request message is a message of the
542 following form:

```
<wsrf-rp:GetMultipleResourcePropertiesResponse>
  {any}*
</wsrf-rp:GetMultipleResourcePropertiesResponse>
```

543 The wsa:Action MUST contain the URI

544 http://docs.oasis-open.org/wsrf/rpw-
545 2/GetMultipleResourceProperties/GetMultipleResourcePropertiesResponse.

546 The contents of the GetMultipleResourcePropertiesResponse message are further described as
547 follows:

548 /wsrf-rp:GetMultipleResourcePropertiesResponse/{any}

549 A collection of resource property values, as XML elements that correspond to the
550 QNames given in the GetMultipleResourceProperties request message. This collection is
551 formed in the following fashion. For each QName in the request message, the resource
552 must add to the collection all child elements of the root of the resource properties
553 document whose name corresponds to that QName. Note: in the case where the
554 resource property element is defined with minOccurs="0" and the resource properties
555 document does not contain any value for that resource property, no child element is
556 added to the collection for that QName. If an implementation cannot return all of the
557 resource property values associated with the request, due to, for example, security
558 considerations, then it MUST fault.

559 If the XML schema definition of the resource properties document root element does not
560 permit the root element to contain a child element with that QName the processing of the
561 GetMultipleResourceProperties request message MUST terminate with an
562 InvalidResourcePropertyQName fault message.

563 The collection of resource property values SHOULD be formed in the same order as the
564 resource property element QNames were specified in the GetMultipleResourceProperties
565 request message.

569 If the WS-Resource does not respond to the GetMultipleResourceProperties request message
570 with the GetMultipleResourcePropertiesResponse message, then it MUST send a fault. This
571 specification defines the following faults associated with failure to process the
572 GetMultipleResourceProperties request message, in addition to those faults defined for all WS-
573 Resources in [WS-Resource]:
574 InvalidResourcePropertyQNameFault

- One or more of the QNames in the request message did not correspond to a resource
property element of the WS-Resource referred to in the request message.

577 One of these faults, or a specialization thereof, SHOULD be sent upon failure, although other
578 fault messages MAY be returned instead.
579 Note: the functionality provided by the GetResourceProperty message exchange is a strict subset
580 of that provided by GetMultipleResourceProperties. WS-ResourceProperties defines two
581 message exchange sets to provide implementation flexibility. GetResourceProperty is a simple,
582 required message exchange that allows simple Web service implementations to be compliant
583 with WS-ResourceProperties. The optional GetMultipleResourceProperties, while more
584 sophisticated, allows efficient retrieval of multiple resource property values using a single
585 message exchange.
586 An example use of the GetMultipleResourceProperties operation is shown in Section 3. Note: it is
587 the responsibility of the requestor to correlate the elements of the response message that
588 correspond to the QNames contained in the request message.

589 **5.3.1 Example SOAP Encoding of the GetMultipleResourceProperties 590 Message Exchange**

591 Consider the resource properties document defining resource properties for a WS-Resource as
592 shown in section 5.1.1. The following is a non-normative example of a
593 GetMultipleResourceProperties request message using SOAP 1.1:

```
594 <s11:Envelope ...>
595   <s11:Header>
596     <wsa:Action>
597       http://docs.oasis-open.org/wsrf/rpw-
598       2/GetMultipleResourceProperties/GetMultipleResourcePropertiesRequest
599     </wsa:Action>
600   ...
601   </s11:Header>
602   <s11:Body>
603     <wsrf-rp:GetMultipleResourceProperties
604       xmlns:tns="http://example.com/diskdrive">
605       <wsrf-rp:ResourceProperty>
606         tns:NumberOfBlocks
607       </wsrf-rp:ResourceProperty>
608       <wsrf-rp:ResourceProperty>
609         tns:BlockSize
610       </wsrf-rp:ResourceProperty>
611     </wsrf-rp:GetMultipleResourceProperties>
612   </s11:Body>
613 </s11:Envelope>
```

614 The following is an example GetMultipleResourcePropertiesResponse message using SOAP 1.1:

```
615 <s11:Envelope ...>
616   <s11:Header>
617     <wsa:Action>
618       http://docs.oasis-open.org/wsrf/rpw-
619       2/GetMultipleResourceProperties/GetMultipleResourcePropertiesResponse
620     </wsa:Action>
621   ...
622   </s11:Header>
623   <s11:Body>
624     <wsrf-rp:GetMultipleResourcePropertiesResponse
625       xmlns:ns1="http://example.com/diskdrive" ...>
626       <ns1:NumberOfBlocks>22</ns1:NumberOfBlocks>
627       <ns1:BlockSize>1024</ns1:BlockSize>
628     </wsrf-rp:GetMultipleResourcePropertiesResponse>
629   </s11:Body>
630 </s11:Envelope>
```

631 5.4 QueryResourceProperties

632 A WS-Resource MAY support the message exchange defined in this section that allows a
633 requestor to query the resource properties document of a WS-Resource using a query expression
634 such as XPath [XPATH].

635 The format of this request message MUST be:

```
636   <wsrf-rp:QueryResourceProperties>
637     <wsrf-rp:QueryExpression Dialect="xsd:anyURI">
638       xsd:any
639     </wsrf-rp:QueryExpression>
640   </wsrf-rp:QueryResourceProperties>
```

641 The wsa:Action MUST contain the URI

642 http://docs.oasis-open.org/wsrf/rpw-
643 2/QueryResourceProperties/QueryResourcePropertiesRequest.

644 The components of the QueryResourceProperties request message are further described as
645 follows:

646 /wsrf-rp:QueryResourceProperties/wsrf-rp:QueryExpression

647 The context of the expression is to be evaluated against the resource properties
648 document of the WS-Resource identified by the request. The results of evaluating the
649 QueryExpression are returned in the response to this request message.

650 /wsrf-rp:QueryResourceProperties/wsrf-rp:QueryExpression/@Dialect

651 This attribute contains a URI specifying the type of expression contained by the element.
652 If the implementation does not recognize the URI identified by @Dialect, it MUST fault.
653 There is one well-known dialect identified by this specification, corresponding to the
654 current stable version of the XPath [XPATH] language.

655 http://www.w3.org/TR/1999/REC-xpath-19991116

656 This URI identifies the XPath 1.0 language. The contents of the
657 QueryExpression MUST be a string containing a valid XPath 1.0
658 expression. The namespace URI prefixes for the in-scope namespace

659 declarations of the QueryExpression element may be used in the XPath
660 expression. The actual namespace declaration may be on any of the
661 ancestors of the QueryResourceProperties element.

662 Note: It is RECOMMENDED that users avoid the use of previously-
663 defined namespace prefixes when there is a chance the message could
664 traverse intermediaries or when encryption is applied to the message, as
665 there is a chance that an intermediary will modify the namespace
666 prefixes. In such cases the expression will become incoherent with
667 respect to the namespace-prefix to namespace-URI mapping intended
668 by the requestor.

669 A WS-Resource that supports the QueryResourceProperties message exchange MUST
670 support QueryExpressions that contain a Dialect with value
671 "<http://www.w3.org/TR/1999/REC-xpath-19991116>". Such a WS-Resource MAY also
672 support other dialects.

673 /wsrf-rp:QueryResourceProperties/QueryExpression/{any}
674 The QueryExpression MUST contain an expression in an expression language specified
675 by the dialect attribute. Note: this element may contain mixed content.

676 The response of the QueryResourceProperties request message MUST be a message of the
677 following form:

678 <wsrf-rp:QueryResourcePropertiesResponse>
679 {any}
680 </wsrf-rp:QueryResourcePropertiesResponse>

681 The wsa:Action MUST contain the URI
682 <http://docs.oasis-open.org/wsrf/rpw-2/QueryResourceProperties/QueryResourcePropertiesResponse>.

683 The contents of the QueryResourcePropertiesResponse message are further described as
684 follows:

685 /wsrf-rp:QueryResourcePropertiesResponse/{any}
686 The response of the QueryResourceProperties request is variable, depending on the
687 nature of the QueryExpression component of the QueryResourceProperties request. The
688 response MUST contain an XML serialization of the results of evaluating the
689 QueryExpression against the resource properties document. Note: this element has
690 mixedContent, to allow for the case where the QueryExpression evaluates to a simple
691 type (such as a Boolean, a string or an integer) as well as the case where a node-set of
692 elements is returned.

693 If the WS-Resource does not respond to the QueryResourceProperties request message with the
694 QueryResourcePropertiesResponse message, then it MUST send a fault. This specification
695 defines the following faults associated with failure to process the QueryResourceProperties
696 request message, in addition to those faults defined for all WS-Resources in [WS-Resource]:
697 UnknownQueryExpressionFault

- The given QueryExpression has a dialect that is unknown to the Web service.

InvalidQueryExpressionFault

- The given QueryExpression is not valid within the QueryExpression language identified
702 by the dialect attribute.

703 QueryEvaluationErrorFault
704 • The QueryExpression failed during evaluation.
705 One of these faults, or a specialization thereof, SHOULD be sent upon failure, although other
706 fault messages MAY be returned instead.

707 **5.4.1 QueryExpressionDialect Resource Property**

708 If a WS-Resource supports the QueryResourceProperty operation and supports dialects in
709 addition to the required XPath 1.0 dialect, then it MUST include a wsrf-rp:QueryExpressionDialect
710 resource property within its resource property document definition. Such a WS-Resource MAY
711 include this resource property if it supports only the XPath 1.0 dialect. The form of the wsrf-
712 rp:QueryExpressionDialect resource property is:

```
713    <wsrf-rp:QueryExpressionDialect>  
714     xsd:anyURI  
715    </wsrf-rp:QueryExpressionDialect>
```

716 Furthermore, this reference MUST reflect the minOccurs and maxOccurs properties as follows:

```
717    <xsd:element ref="wsrf-rp:QueryExpressionDialect"  
718        minOccurs="0" maxOccurs="unbounded" />
```

719 This resource property element is further constrained as follows:

720 /wsrf-rp:QueryExpressionDialect

721 This resource property declares one or more QueryExpression dialects that are
722 supported by the Web service.

723 /wsrf-rp:QueryExpressionDialect/{anyURI}

724 If a requestor sends a QueryResourceProperties request message using a
725 QueryExpression with Dialect matching the URI contained in this resource property
726 element, the WS-Resource MUST NOT issue an *UnknownQueryExpressionDialect* fault.
727 The value of this element is a URI that MUST correspond to a QueryExpression dialect.

728 **5.4.2 Example SOAP Encoding of the QueryResourceProperties Message Exchange**

730 Consider the resource properties document defining resource properties for a WS-Resource as
731 shown in Section 5.1.1. The following is a non-normative example of a QueryResourceProperties
732 request message using SOAP 1.1:

```
733    <s11:Envelope ...>  
734     <s11:Header>  
735        <wsa:Action>  
736        http://docs.oasis-open.org/wsrf/rpw-  
737        2/QueryResourceProperties/QueryResourcePropertiesRequest  
738        </wsa:Action>  
739        ...  
740        </s11:Header>  
741        <s11:Body>  
742        <wsrf-rp:QueryResourceProperties>  
743        <wsrf-rp:QueryExpression  
744           Dialect="http://www.w3.org/TR/1999/REC-xpath-19991116" >
```

```
745     boolean(/*/NumberOfBlocks > 20 and /*/BlockSize=1024)
746     </wsrf-rp:QueryExpression>
747     </wsrf-rp:QueryResourceProperties>
748     </s11:Body>
749   </s11:Envelope>
```

750 The following is an example QueryResourcePropertiesResponse message using SOAP 1.1,
751 containing the results of evaluating that XPath [[XPATH](#)] expression against the root element of
752 the resource's resource properties document:

```
753 <s11:Envelope ...>
754   <s11:Header>
755     <wsa:Action>
756     http://docs.oasis-open.org/wsrf/rpw-
757     2/QueryResourceProperties/QueryResourcePropertiesResponse
758     </wsa:Action>
759   </s11:Header>
760   <s11:Body>
761     <wsrf-rp:QueryResourcePropertiesResponse>
762       true
763     </wsrf-rp:QueryResourcePropertiesResponse>
764   </s11:Body>
765 </s11:Envelope>
```

766 5.5 PutResourcePropertyDocument

767 A WS-Resource MAY support the message exchange defined in this section that allows a
768 requestor to completely replace the values of a WS-Resource's properties with an entirely new
769 resource property document. This message exchange is symmetric to the
770 GetResourcePropertyDocument message exchange defined in Section 5.1.

771 The format of the PutResourcePropertyDocument request message MUST be:

```
772 <wsrf-rp:PutResourcePropertyDocument>
773   {any}
774 </wsrf-rp:PutResourcePropertyDocument>
```

775 The wsa:Action MUST contain the URI

776 http://docs.oasis-open.org/wsrf/rpw-
777 2/PutResourcePropertyDocument/PutResourcePropertyDocumentRequest.

778 The contents of the PutResourcePropertyDocument request message are further described as
779 follows:

780 /wsrf-rp:PutResourcePropertyDocument/{any}

781 An XML element that MUST correspond to the element declared in the value of the
782 ResourceProperties attribute of the portType defining the PutResourcePropertyDocument
783 operation. This is the value the requestor intends to be the new resource property
784 document for the WS-Resource.

785 The response of the PutResourcePropertyDocument request message is a message of the
786 following form:

```
787 <wsrf-rp:PutResourcePropertyDocumentResponse>
```

788 {any} ?
789 </wsrf-rp:PutResourcePropertyDocumentResponse>

790 The wsa:Action MUST contain the URI
791 http://docs.oasis-open.org/wsrf/rpw-
792 2/PutResourcePropertyDocument/PutResourcePropertyDocumentResponse.

793 The contents of the PutResourcePropertyDocumentResponse message are further described as
794 follows:

795 /wsrf-rp:PutResourcePropertyDocumentResponse/{any}

796 If, after processing the PutResourcePropertyDocument request, the XML Infoset of the
797 WS-Resource's resource properties document is identical to the XML Infoset of the
798 contents of the PutResourcePropertyDocument request itself, then the contents of the
799 PutResourcePropertyDocumentResponse MUST be empty.

800 If, after processing the PutResourcePropertyDocument request, the XML Infoset of the
801 WS-Resource's resource properties document is **not** identical to the XML Infoset of the
802 contents of the PutResourcePropertyDocument request itself, then the contents of the
803 PutResourcePropertyDocumentResponse MUST contain the updated resource property
804 document. If an implementation cannot return all of the resource property values
805 associated with the request, due to, for example, security considerations, then it MUST
806 fault.

807 If the WS-Resource does not respond to the PutResourcePropertyDocument request message
808 with the PutResourcePropertyDocumentResponse message, then it MUST send a fault. If the
809 request results in a fault for any reason, such as read-only property changed or some other
810 update fault, none of the resource properties are modified. This specification defines the following
811 faults associated with failure to process the PutResourcePropertyDocument request message, in
812 addition to those faults defined for all WS-Resources in [WS-Resource]:

813 UnableToPutResourcePropertyDocumentFault

814 • The WS-Resource was unable to complete the processing of the
815 PutResourcePropertyDocument for some reason.

816 One of these faults, or a specialization thereof, SHOULD be sent upon failure, although other
817 fault messages MAY be returned instead.

818 **5.5.1 Example SOAP Encoding of the**
PutResourcePropertyDocument Message Exchange

819 Consider the resource properties document defining resource properties for a WS-Resource as
820 shown in Section 5.1.1. The following is a non-normative example of a
821 PutResourcePropertyDocument request message using SOAP 1.1:

823 <s11:Envelope ...>
824 <s11:Header>
825 <wsa:Action>
826 http://docs.oasis-open.org/wsrf/rpw-
827 2/PutResourcePropertyDocument/PutResourcePropertyDocumentRequest
828 </wsa:Action>
829 ...
830 </s11:Header>
831 <s11:Body>

```
832 <wsrf-rp:PutResourcePropertyDocument>
833   <tns:GenericDiskDriveProperties
834     xmlns:tns="http://example.com/diskDrive"
835     xmlns:cap="http://example.com/capabilities">
836     <tns:NumberOfBlocks>22</tns:NumberOfBlocks>
837     <tns:BlockSize>1024</tns:BlockSize>
838     <tns:Manufacturer>DrivesRUs</tns:Manufacturer>
839     <tns:StorageCapability>
840       <cap>NoSinglePointOfFailure>true</cap>NoSinglePointOfFailure>
841     </tns:StorageCapability>
842     <tns:StorageCapability>
843       <cap>DataRedundancyMax>42</cap>DataRedundancyMax>
844     </tns:StorageCapability>
845   </tns:GenericDiskDriveProperties>
846 </wsrf-rp:PutResourcePropertyDocument>
847 </s11:Body>
848 </s11:Envelope>
```

849 The following is an example PutResourcePropertyDocumentResponse message using SOAP
850 1.1:

```
851 <s11:Envelope ...>
852   <s11:Header>
853     <wsa:Action>
854     http://docs.oasis-open.org/wsrf/rpw-
855     2/PutResourcePropertyDocument/PutResourcePropertyDocumentResponse
856   </wsa:Action>
857   ...
858   </s11:Header>
859   <s11:Body>
860     <wsrf-rp:PutResourcePropertyDocumentResponse />
861   </s11:Body>
862 </s11:Envelope>
```

863 5.6 SetResourceProperties

864 A WS-Resource MAY support the message exchange defined in this section that allows a
865 requestor to modify the values of multiple resource properties of a WS-Resource.

866 The SetResourceProperties message allows the processing of a single request message to make
867 multiple changes to the resource properties document. There are three types of changes, each
868 modeled as separate types of component (called SetRequestComponent) of a
869 SetResourceProperties request message:

- 870 • Insert: wherein a new resource property element is inserted into the resource properties
871 document;
- 872 • Update: wherein existing resource property element(s) are modified; and
- 873 • Delete: wherein existing resource property element(s) are removed.

874 The format of this request message MUST be:

```
875 <wsrf-rp:SetResourceProperties>
876 [
```

```
877 <wsrf-rp:Insert >  
878   {any}*  
879 </wsrf-rp:Insert> |  
880  
881 <wsrf-rp:Update >  
882   {any}*  
883 </wsrf-rp:Update> |  
884  
885 <wsrf-rp:Delete ResourceProperty="QName" />  
886 ]+  
887 </wsrf-rp:SetResourceProperties>
```

888 The wsa:Action MUST contain the URI

889 <http://docs.oasis-open.org/wsrf/rpw-2/SetResourceProperties/SetResourcePropertiesRequest>.

891 The contents of the SetResourceProperties request message are further described as follows:

892 /wsrf-rp:SetResourceProperties

893 This element contains a collection of one or more components called
894 SetRequestComponents. Each of the SetRequestComponents must be processed
895 against the WS-Resource's resource properties document. These
896 SetRequestComponents MUST appear to be processed in the order in which they are
897 listed in the request. Each request component MUST be processed to completion in this
898 conceptual sequence before a subsequent SetRequestComponent is processed. The
899 result of processing a given SetRequestComponent MUST be observable to the
900 processing of a subsequent SetRequestComponent, and to subsequent message
901 exchanges with the same WS-Resources.

902 If a service fails to process a SetRequestComponent, it MUST cease processing the
903 SetResourceProperties request message. The values of the resource properties
904 associated with this SetRequestComponent MAY reflect partial processing of this
905 SetRequestComponent. An implementation MAY restore the contents of the resource
906 properties document to a state as if no processing of the failed SetRequestComponent
907 had occurred. The implementation MAY additionally choose to restore the resource
908 properties document as if none of the SetRequestComponents had been processed.
909 Refer to Section 7 for additional information of resource recovery.

910 /wsrf-rp:SetResourceProperties/wsrp-rp:Insert

911 The intent of this component is to insert the contents of the component into the resource
912 properties document. The exact placement of the element insertion is implementation-
913 dependent. If, as a result of processing the Insert component, the resource properties
914 document is no longer able to validate, the processing of the component MUST fault. The
915 implementation may be unable to accept the insertion of an element because it does not
916 allow the requestor to insert a resource property (or its value) of that given name. In such
917 circumstances, the resource MUST fault the processing of the component.

918 /wsrf-rp:SetResourceProperties/wsrp-rp:Insert/{any}

919 This component identifies the element(s) to be inserted into the resource properties
920 document. If there are multiple child elements of the Insert component, each MUST have
921 the same namespace and name (i.e. the same QName). The QName MUST correspond
922 to the QName of a resource property element associated with the WS-Resource (i.e. an

923 element that is a valid child element of the root element of the resource properties
924 document). Note, for those resource properties documents that allow open element
925 content, the set of valid content types can be very large.

926 /wsrf-rp:SetResourceProperties/wsrf-rp:Update
927 The intent of this component is to change the value of the resource property by removing
928 any and all resource property element(s) of the given QName and replacing them with
929 the contents of this component. If, as a result of processing the Update component, the
930 resource properties document is no longer able to validate, the processing of the
931 component MUST fault. The resource may be unable to accept the update of an element
932 because it does not allow the requestor to update a resource property (or its value) of
933 that given name. In such circumstances, the resource MUST fault the processing of the
934 component.

935 /wsrf-rp:SetResourceProperties/wsrf-rp:Update/{any}
936 This identifies the element(s) to be inserted into the resource properties document,
937 replacing all element children of the root of the resource properties document with the
938 same QName. If there are multiple child elements of the Insert component, each MUST
939 have the same namespace and name (i.e. the same QName). The QName MUST
940 correspond to the QName of a resource property element associated with the WS-
941 Resource (i.e. an element that is a valid child element of the root element of the resource
942 properties document). Note, for those resource properties documents that allow open
943 element content, the set of valid content types can be very large.

944 /wsrf-rp:SetResourceProperties/wsrf-rp:Delete
945 The intent of this component is to remove all element children of the root of the resource
946 properties document whose QNames correspond to the value of @ResourceProperty. If
947 the resource is unable to remove all identified elements, the processing of the component
948 MUST fault. If, as a result of processing the Delete component, the resource properties
949 document is no longer able to validate, the processing of the component MUST fail. The
950 resource may be unable to accept the delete of an element because it does not allow the
951 requestor to delete a resource property (or its value) of the given name. In such
952 circumstances, the resource MUST fault the processing of the component.

953 /wsrf-rp:SetResourceProperties/wsrf-rp:Delete/@ResourceProperty
954 This attribute contains the QName of a resource property to be deleted by this
955 component.

956 The response of the SetResourceProperties request message, all of whose components were
957 successfully processed, MUST be a message of the following form:

```
<wsrf-rp:SetResourcePropertiesResponse>
</wsrf-rp:SetResourcePropertiesResponse>
```

960 The wsa:Action MUST contain the URI
961 http://docs.oasis-open.org/wsrf/rpw-
962 2/SetResourceProperties/SetResourcePropertiesResponse.
963 If the WS-Resource does not respond to the SetResourceProperties request message with the
964 SetResourcePropertiesResponse message, then it MUST send a fault message. This
965 specification defines the following faults associated with failure to process the
966 SetResourcePropertyDocument request message, in addition to those faults defined for all WS-
967 Resources in [WS-Resource]:

968 InvalidModificationFault

969 • The contents of the SetResourceProperties request component cause the resource
970 properties document to no longer be able to validate.

971 UnableToModifyResourcePropertyFault

972 • A resource property identified by one of the SetResourceProperties request components
973 is read-only.

974 InvalidResourcePropertyQNameFault

975 • A resource property QName does not identify a resource property.

976 SetResourcePropertyRequestFailedFault

977 • One or more components of the SetResourceProperties request failed.

978 One of these faults, or a specialization thereof, SHOULD be sent upon failure, although other
979 fault messages MAY be returned instead.

980 Any fault message indicating a failure during the update of the resource properties document
981 MUST also indicate whether the document was restored or not by using the
982 ResourcePropertyChangeFailure element of the fault. This fault element indicates the resource
983 property element change associated with the fault and indicates if the resource property
984 document as a whole was restored. The format of this element is indicated as follows:

985 <wsrf-rp:ResourcePropertyChangeFailure Restored=xsd:boolean?>
986 <wsrf-rp:CurrentValue>{any}*</wsrf-rp:CurrentValue> ?
987 <wsrf-rp:RequestedValue>{any}*</wsrf-rp:RequestedValue> ?
988 </wsrf-rp:ResourcePropertyChangeFailure>

989 This element is further constrained as follows:

990 /wsrf-rp:ResourcePropertyChangeFailure

991 The contents of this element provide more information about the element associated with
992 a failed modification to a resource property document.

993 /wsrf-rp:ResourcePropertyChangeFailure/@Restored

994 If the value of this optional attribute is “true”, then the resource property document was
995 restored to its state prior to the attempt to process the request message. The absence of
996 this attribute is identical to this attribute having the value “false”, indicating that no attempt
997 was made to restore the resource property document.

998 /wsrf-rp:ResourcePropertyChangeFailure/wsrf-rp:CurrentValue

999 If present, this component contains the current value(s) of the resource property
1000 elements associated with the fault.

1001 /wsrf-rp:ResourcePropertyChangeFailure/wsrf-rp:RequestedValue

1002 If present, this component contains the value(s) of the resource property elements
1003 associated with the fault as found within the request message.

1004 Note: There is no isolation policy implied, for either modifications to the resource properties
1005 document resulting from the processing of the request or the modifications implemented by the
1006 restore. See Section 7 for more discussion.

1007 **5.6.1 Example SOAP Encoding of the SetResourceProperties**
1008 **Message Exchange**

1009 Consider the resource properties document defining resource properties for a WS-Resource as
1010 shown in Section 5.1.1.: The following is a non-normative example of a SetResourceProperties
1011 request message using SOAP 1.1:

```
1012 <s11:Envelope ...>
1013   <s11:Header>
1014     <wsa:Action>
1015     http://docs.oasis-open.org/wsrf/rpw-2/SetResourceProperties/SetResourcePropertiesRequest
1016   </wsa:Action>
1017 ...
1018   </s11:Header>
1019   <s11:Body>
1020     <wsrf-rp:SetResourceProperties
1021       xmlns:tns="http://example.com/diskdrive">
1022       <wsrf-rp:Update>
1023         <tns:NumberOfBlocks>143</tns:NumberOfBlocks>
1024       </wsrf-rp:Update>
1025
1026       <wsrf-rp:Delete ResourceProperty="tns:StorageCapability" />
1027
1028       <wsrf-rp:Insert>
1029         <tns:someElement>42</tns:someElement>
1030       </wsrf-rp:Insert>
1031
1032     </wsrf-rp:SetResourceProperties>
1033   </s11:Body>
1034 </s11:Envelope>
```

1035 The following is an example SetResourcePropertiesResponse message using SOAP 1.1:

```
1036 <s11:Envelope ...>
1037   <s11:Header>
1038     <wsa:Action>
1039     http://docs.oasis-open.org/wsrf/rpw-2/SetResourceProperties/SetResourcePropertiesResponse
1040   </wsa:Action>
1041 ...
1042   </s11:Header>
1043   <s11:Body>
1044     <wsrf-rp:SetResourcePropertiesResponse>
1045     </wsrf-rp:SetResourcePropertiesResponse>
1046   </s11:Body>
1047 </s11:Envelope>
```

1048 The new contents of the resource properties document after successful processing of the request
1049 message will be:

```
1050   <tns:xmlns:tns="http://example.com/diskDrive" >
1051     <tns:NumberOfBlocks>143</tns:NumberOfBlocks>
```

```
1052 <tns:BlockSize>1024</tns:BlockSize>
1053 <tns:someElement>42</tns:someElement>
1054 <tns:Manufacturer>DrivesRUs</tns:Manufacturer>
1055 </tns:GenericDiskDriveProperties>
```

1056 Now consider the situation wherein it is illegal to change the value of the resource property
1057 `tns:Manufacturer`, for example because the resource property is not modifiable. If a
1058 `SetResourceProperties` operation contained a component that attempted to modify this resource
1059 property value, then a fault message would be returned in response to the
1060 `SetResourceProperties` request, and that fault message would contain the following XML
1061 fragment:

```
1062 ...
1063 <wsrf-rp:ResourcePropertyChangeFailure Restored="true">
1064   <wsrf-rp:CurrentValue>
1065     <tns:Manufacturer>DrivesRUs</tns:Manufacturer>
1066   </wsrf-rp:CurrentValue>
1067   <wsrf-rp:RequestedValue>
1068     <tns:Manufacturer>BogusName</tns:Manufacturer>
1069   </wsrf-rp:RequestedValue>
1070 </wsrf-rp:ResourcePropertyChangeFailure>
```

5.7 InsertResourceProperties

A WS-Resource MAY support the message exchange defined in this section that allows a requestor to insert new values of a resource property of a WS-Resource.
The `InsertResourceProperties` message is used to request the insertion of one or more element values of a single resource property into the resource properties document of a WS-Resource.
The format of this request message MUST be:

```
<wsrf-rp:InsertResourceProperties>
  <wsrf-rp:Insert>
    {any}*
  </wsrf-rp:Insert>
</wsrf-rp:InsertResourceProperties>
```

The `wsa:Action` MUST contain the URI
<http://docs.oasis-open.org/wsrf/rpw-2/InsertResourceProperties/InsertResourcePropertiesRequest>.
The contents of the `InsertResourceProperties` request message are further described as follows:
`/wsrf-rp:InsertResourceProperties/wsrf-rp:Insert`
The intent of this component is to insert the contents of the component into the resource properties document. The exact placement of the element insertion is implementation-dependent. If, as a result of processing the `InsertResourceProperties` request, the resource properties document is no longer able to validate, the processing of the request MUST fault. The implementation may be unable to accept the insertion of an element because it does not allow the requestor to insert a resource property (or its value) of that given name. In such circumstances, the resource MUST fault the processing of the request message.

1095 /wsrf-rp:InsertResourceProperties/wsrf-rp:Insert/{any}

1096 This component identifies the element(s) to be inserted into the resource properties

1097 document. If there are multiple child elements of the wsrf-rp:Insert element, each MUST

1098 have the same namespace and name (i.e. the same QName). The QName MUST

1099 correspond to the QName of a resource property element associated with the WS-

1100 Resource (i.e. an element that is a valid child element of the root element of the resource

1101 properties document). Note, for those resource properties documents that allow open

1102 element content, the set of valid content types can be very large.

1103 When an InsertResourceProperties request message has been successfully processed, the

1104 response message MUST have the following form:

1105 <wsrf-rp:InsertResourcePropertiesResponse>

1106 </wsrf-rp:InsertResourcePropertiesResponse>

1107 The wsa:Action MUST contain the URI

1108 http://docs.oasis-open.org/wsrf/rpw-

1109 2/InsertResourceProperties/InsertResourcePropertiesResponse.

1110 If the WS-Resource does not respond to the InsertResourceProperties request message with the

1111 InsertResourcePropertiesResponse message, then it MUST send a fault. This specification

1112 defines the following faults associated with failure to process the InsertResourceProperties

1113 request message, in addition to those faults defined for all WS-Resources in [WS-Resource]:

1114 InvalidModificationFault

- The contents of the InsertResourceProperties request component cause the resource properties document to no longer be able to validate.

1117 UnableToModifyResourcePropertyFault

- A resource property identified by the InsertResourceProperties request is not modifiable.

1119 InvalidResourcePropertyQNameFault

- A resource property QName does not identify a resource property.

1121 InsertResourcePropertiesRequestFailedFault

- The InsertResourceProperties request failed for some reason.

1123 One of these faults, or a specialization thereof, SHOULD be sent upon failure, although other

1124 fault messages MAY be returned instead.

1125 Any fault message indicating a failure during the update of the resource properties document

1126 MUST also indicate whether the document was restored by using the

1127 ResourcePropertyChangeFailure element of the fault. This fault element indicates the resource

1128 property element change associated with the fault and indicates if the resource property

1129 document as a whole was restored. The format of this element is described in Section 5.6.

1130 **5.7.1 Example SOAP Encoding of the InsertResourceProperties**

1131 **Message Exchange**

1132 Consider the following resource properties document defining resource properties for a WS-

1133 Resource defined by the GenericDiskDrive portType:

```
<tns:GenericDiskDriveProperties xmlns:tns="http://example.com/diskDrive" >
  <tns:NumberOfBlocks>22</tns:NumberOfBlocks>
  <tns:BlockSize>1024</tns:BlockSize>
  <tns:Manufacturer>DrivesRUs</tns:Manufacturer>
```

1138 </tns:GenericDiskDriveProperties>
1139 The following is a non-normative example of an InsertResourceProperties request message using
1140 SOAP 1.1:

```
1141 <s11:Envelope ...>
1142   <s11:Header>
1143     <wsa:Action>
1144     http://docs.oasis-open.org/wsrf/rpw-
1145     2/InsertResourceProperties/InsertResourcePropertiesRequest
1146     </wsa:Action>
1147 ...
1148   </s11:Header>
1149   <s11:Body>
1150     <wsrf-rp:InsertResourceProperties
1151       xmlns:tns="http://example.com/diskdrive">
1152       <wsrf-rp:Insert>
1153         <tns:StorageCapability>
1154           <tns>NoSinglePointOfFailure>true</tns>NoSinglePointOfFailure>
1155         </tns:StorageCapability>
1156         <tns:StorageCapability>
1157           <tns>DataRedundancyMax>42</tns>DataRedundancyMax>
1158         </tns:StorageCapability>
1159       </wsrf-rp:Insert>
1160 
1161     </wsrf-rp:InsertResourceProperties>
1162   </s11:Body>
1163 </s11:Envelope>
```

1164 The following is an example InsertResourcePropertiesResponse message using SOAP 1.1:

```
1165 <s11:Envelope ...>
1166   <s11:Header>
1167     <wsa:Action>
1168     http://docs.oasis-open.org/wsrf/rpw-
1169     2/InsertResourceProperties/InsertResourcePropertiesResponse
1170     </wsa:Action>
1171 ...
1172   </s11:Header>
1173   <s11:Body>
1174     <wsrf-rp:InsertResourcePropertiesResponse>
1175     <wsrf-rp:InsertResourcePropertiesResponse>
1176   </s11:Body>
1177 </s11:Envelope>
```

1178 The new contents of the resource properties document after successful processing of the request
1179 message will be:

```
1180 <tns:GenericDiskDriveProperties xmlns:tns="http://example.com/diskDrive" >
1181   <tns:NumberOfBlocks>22</tns:NumberOfBlocks>
1182   <tns:BlockSize>1024</tns:BlockSize>
1183   <tns:Manufacturer>DrivesRUs</tns:Manufacturer>
```

```
1184 <tns:StorageCapability>
1185   <tns>NoSinglePointOfFailure>true</tns>NoSinglePointOfFailure>
1186 </tns:StorageCapability>
1187 <tns:StorageCapability>
1188   <tns>DataRedundancyMax>42</tns>DataRedundancyMax>
1189 </tns:StorageCapability>
1190 </tns:GenericDiskDriveProperties>
```

5.8 UpdateResourceProperties

A WS-Resource MAY support the message exchange defined in this section that allows a requestor to replace the existing values of a resource property with new values.

The UpdateResourceProperties message is used to request the replacement of all the element values of a single resource property in the resource properties document of a WS-Resource with a new set of values.

The format of this request message MUST be:

```
<wsrf-rp:UpdateResourceProperties>
  <wsrf-rp:Update>
    {any}*
  </wsrf-rp:Update>
</wsrf-rp:UpdateResourceProperties>
```

The wsa:Action MUST contain the URI

<http://docs.oasis-open.org/wsrf/rpw-2/UpdateResourceProperties/UpdateResourcePropertiesRequest>.

The contents of the UpdateResourceProperties request message are further described as follows:

/wsrf-rp:UpdateResourceProperties/wsrp-rp:Update

The intent of this request is to change the value of the elements of a resource property by removing any and all resource property element(s) of the given QName and replacing them with the contents of this component. If, as a result of processing the entire UpdateResourceProperties request, the resource properties document is no longer able to validate, the processing of the request MUST fault. The resource may be unable to accept the update of an element because it does not allow the requestor to update a resource property (or its value) of that given name. In such circumstances, the resource MUST fault the processing of the request message.

/wsrf-rp:UpdateResourceProperties/wsrp-rp:Update/{any}

This identifies the element(s) to be inserted into the resource properties document, replacing all element children of the root of the resource properties document with the same QName. If there are multiple child elements of the wsrp-rp:Update component, each MUST have the same namespace and name (i.e. the same QName). The QName MUST correspond to the QName of a resource property element associated with the WS-Resource (i.e. an element that is a valid child element of the root element of the resource properties document). Note: for those resource properties documents that allow open element content, the set of valid content types can be very large.

When an UpdateResourceProperties request message has been successfully processed, the response message MUST have the following form:

1228 <wsrf-rp:UpdateResourcePropertiesResponse>
1229 </wsrf-rp:UpdateResourcePropertiesResponse>

1230 The wsa:Action MUST contain the URI
1231 http://docs.oasis-open.org/wsrf/rpw-
1232 2/UpdateResourceProperties/UpdateResourcePropertiesResponse.

1233 If the WS-Resource does not respond to the UpdateResourceProperties request message with
1234 the UpdateResourcePropertiesResponse message, then it MUST send a fault. This specification
1235 defines the following faults associated with failure to process the UpdateResourceProperties
1236 request message, in addition to those faults defined for all WS-Resources in [WS-Resource]:

1237 InvalidModificationFault

- The contents of the UpdateResourceProperties request component cause the resource properties document to no longer be able to validate.

1238 UnableToModifyResourcePropertyFault

- A resource property identified by the UpdateResourceProperties request is not modifiable.

1239 InvalidResourcePropertyQNameFault

- A resource property QName does not identify a resource property.

1240 UpdateResourcePropertiesRequestFailedFault

- The UpdateResourceProperties request failed for some reason.

1241 One of these faults, or a specialization thereof, SHOULD be sent upon failure, although other
1242 fault messages MAY be returned instead.

1243 Any fault message indicating a failure during the update of the resource properties document
1244 MUST also indicate whether the document was restored by using the
1245 ResourcePropertyChangeFailure element of the fault. This fault element indicates the resource property
1246 element change associated with the fault and indicates if the resource property
1247 document as a whole was restored. The format of this element is described in Section 5.6.

1248 **5.8.1 Example SOAP Encoding of the UpdateResourceProperties Message Exchange**

1249 Consider the resource properties document defining resource properties for a WS-Resource as
1250 shown in Section 5.7.1. The following is a non-normative example of an
1251 UpdateResourceProperties request message using SOAP 1.1:

1252 <s11:Envelope ...>
1253 <s11:Header>
1254 <wsa:Action>
1255 http://docs.oasis-open.org/wsrf/rpw-
1256 2/UpdateResourceProperties/UpdateResourcePropertiesRequest
1257 </wsa:Action>
1258 ...
1259 </s11:Header>
1260 <s11:Body>
1261 <wsrf-rp:UpdateResourceProperties
1262 xmlns:tns="http://example.com/diskdrive">
1263 <wsrf-rp:Update>

```
1271     <tns:NumberOfBlocks>143</tns:NumberOfBlocks>
1272     </wsrf-rp:Update>
1273     </wsrf-rp:UpdateResourceProperties>
1274     </s11:Body>
1275     </s11:Envelope>
```

1276 The following is an example UpdateResourcePropertiesResponse message using SOAP 1.1:

```
1277 <s11:Envelope ...>
1278   <s11:Header>
1279     <wsa:Action>
1280     http://docs.oasis-open.org/wsrf/rpw-
1281     2/UpdateResourceProperties/UpdateResourcePropertiesResponse
1282     </wsa:Action>
1283   ...
1284   </s11:Header>
1285   <s11:Body>
1286     <wsrf-rp:UpdateResourcePropertiesResponse>
1287     </wsrf-rp:UpdateResourcePropertiesResponse>
1288   </s11:Body>
1289 </s11:Envelope>
```

1290 The new contents of the resource properties document after successful processing of the request
1291 message will be:

```
1292 <tns:GenericDiskDriveProperties xmlns:tns="http://example.com/diskDrive" >
1293   <tns:NumberOfBlocks>143</tns:NumberOfBlocks>
1294   <tns:BlockSize>1024</tns:BlockSize>
1295   <tns:Manufacturer>DrivesRUs</tns:Manufacturer>
1296 </tns:GenericDiskDriveProperties>
```

1297 **5.9 DeleteResourceProperties**

1298 A WS-Resource MAY support the message exchange defined in this section that allows a
1299 requestor to remove all values of a resource property of a WS-Resource.

1300 The DeleteResourceProperties message is used to request the removal of all values of a single
1301 resource property from the resource properties document of a WS-Resource.

1302 The format of this request message MUST be:

```
1303 <wsrf-rp:DeleteResourceProperties>
1304   <wsrf-rp:Delete ResourceProperty="QName" />
1305 </wsrf-rp:DeleteResourceProperties>
```

1306 The wsa:Action MUST contain the URI

1307 http://docs.oasis-open.org/wsrf/rpw-
1308 2/DeleteResourceProperties/DeleteResourcePropertiesRequest.

1309 The contents of the DeleteResourceProperties request message are further described as follows:
1310 /wsrf-rp:DeleteResourceProperties/wsrf-rp:Delete

1311 The intent of this message is to remove all element children of the root of the resource
1312 properties document whose QNames correspond to the value of @ResourceProperty. If
1313 the resource is unable to remove all identified elements, the processing of the message

1314 MUST fault. If, as a result of processing the DeleteResourceProperty request, the resource
1315 properties document is no longer able to validate, the processing of the request MUST
1316 fault. The resource may be unable to accept the deletion of an element because it does
1317 not allow the requestor to delete a resource property (or its value) of the given name. In
1318 such circumstances, the resource MUST fault the processing of the request message.

1319 /wsrf-rp:DeleteResourceProperties/wsrf-rp:Delete/@ResourceProperty

1320 This attribute contains the QName of a resource property to be deleted by this request.

1321 When a DeleteResourceProperties request message has been successfully processed, the
1322 response message MUST have the following form:

```
<wsrf-rp:DeleteResourcePropertiesResponse>
</wsrf-rp:DeleteResourcePropertiesResponse>
```

1325 The wsa:Action MUST contain the URI

1326 http://docs.oasis-open.org/wsrf/rpw-
1327 2/DeleteResourceProperties/DeleteResourcePropertiesResponse.

1328 If the WS-Resource does not respond to the DeleteResourceProperties request message with the
1329 DeleteResourcePropertiesResponse message, then it MUST send a fault. This specification
1330 defines the following faults associated with failure to process the DeleteResourceProperties
1331 request message, in addition to those faults defined for all WS-Resources in [WS-Resource]:

1332 InvalidModificationFault

- The contents of the DeleteResourceProperties request component cause the resource properties document to no longer be able to validate.

1335 UnableToModifyResourcePropertyFault

- A resource property identified by the DeleteResourceProperties request is not modifiable.

1337 InvalidResourcePropertyQNameFault

- A resource property QName does not identify a resource property.

1339 DeleteResourcePropertiesRequestFailedFault

- One or more components of the DeleteResourceProperties request failed.

1341 One of these faults, or a specialization thereof, SHOULD be sent upon failure, although other
1342 fault messages MAY be returned instead.

1343 Any fault message indicating a failure during the update of the resource properties document
1344 MUST also indicate whether the document was restored by using the
1345 ResourcePropertyChangeFailure element of the fault. This fault element indicates the resource
1346 property element change associated with the fault and indicates if the resource property
1347 document as a whole was restored. The format of this element is described in Section 5.6.

1348 **5.9.1 Example SOAP Encoding of the DeleteResourceProperties 1349 Message Exchange**

1350 Consider the resource properties document defining resource properties for a WS-Resource as
1351 shown in Section 5.7.1. The following is a non-normative example of a DeleteResourceProperties
1352 request message using SOAP 1.1:

```
<s11:Envelope ...>
<s11:Header>
<wsa:Action>
```

```
1356 http://docs.oasis-open.org/wsrf/rpw-
1357 2/DeleteResourceProperties/DeleteResourcePropertiesRequest
1358 </wsa:Action>
1359 ...
1360 </s11:Header>
1361 <s11:Body>
1362 <wsrf-rp:DeleteResourceProperties
1363     xmlns:tns="http://example.com/diskdrive">
1364     <wsrf-rp:Delete ResourceProperty="tns:Manufacturer" />
1365 </wsrf-rp:DeleteResourceProperties>
1366 </s11:Body>
1367 </s11:Envelope>
```

1368 The following is an example DeleteResourcePropertiesResponse message using SOAP 1.1:

```
1369 <s11:Envelope ...>
1370   <s11:Header>
1371     <wsa:Action>
1372     http://docs.oasis-open.org/wsrf/rpw-
1373     2/DeleteResourceProperties/DeleteResourcePropertiesResponse
1374   </wsa:Action>
1375 ...
1376   </s11:Header>
1377   <s11:Body>
1378     <wsrf-rp:DeleteResourcePropertiesResponse>
1379     </wsrf-rp:DeleteResourcePropertiesResponse>
1380   </s11:Body>
1381 </s11:Envelope>
```

1382 The new contents of the resource properties document after successful processing of the request
1383 message will be:

```
1384 <tns:GenericDiskDriveProperties xmlns:tns="http://example.com/diskDrive" >
1385   <tns:NumberOfBlocks>22</tns:NumberOfBlocks>
1386   <tns:BlockSize>1024</tns:BlockSize>
1387 </tns:GenericDiskDriveProperties>
```

1388 6 Subscription

1389 The WS-Notification [[WS-BaseNotification](#)] [[WS-Topics](#)] family of specifications describes the
1390 patterns, concepts, standard message exchanges, and protocols of a topic-based, publish-
1391 subscribe messaging pattern in Web services. In the notification model, a service creates
1392 messages that are delivered to other services that had previously registered interest in the
1393 situation associated with that message.

1394 With WS-ResourceProperties, it is a common pattern for Web service requestors to request
1395 notification of inserts, updates and deletions made to the values of one or more resource property
1396 elements of a given WS-Resource. This suggests the need for the WS-Resource to encapsulate
1397 the stateful resource to ensure all changes made to the stateful resource (those made by Web
1398 services invocations, or those that happen to the resource by other means) are *observed* by the
1399 WS-Resource implementation. To the extent that encapsulation is not provided, and changes to
1400 the stateful resource are made outside of the knowledge of the associated WS-Resource
1401 implementation, the WS-Resource may not be able to provide notifications reflecting those
1402 changes.

1403 If a WS-Resource supports the resource property value-change notification pattern, and if it uses
1404 WS-Notification to implement this feature, then it MUST implement the message exchanges for
1405 the NotificationProducer role, as specified in [[WS-BaseNotification](#)]. The WS-Resource MAY
1406 accept subscriptions to only a subset of the resource properties defined for a WS-Resource. If an
1407 implementation does not use WS-Notification, then it MAY ignore the requirements outlined in this
1408 section.

1409 6.1 Individual Resource Property Value Changes

1410 One notification message artifact is created for each change to each resource property observed
1411 by the WS-Resource implementation. For example, a SetResourceProperties request message
1412 might contain five SetRequestComponents. Each of these components would result in the
1413 creation of a separate message artifact. A PutResourcePropertyDocument request might result in
1414 the change of most of the WS-Resource's resource properties, in which case each resource
1415 property changed by the PutResourcePropertyDocument request would result in a separate
1416 message artifact.

1417 WS-ResourceProperties defines the Notification TopicExpressions and TopicNamespace
1418 elements [[WS-Topics](#)] that MUST be used to express the organization of the WS-Resource
1419 property element value change notifications. By understanding the relationship between
1420 TopicExpressions and resource properties, and examining the set of TopicExpressions supported
1421 by the NotificationProducer Web service, the service requestor can determine which of the
1422 resource properties are able to participate in the value-change notification pattern. The
1423 TopicExpression and TopicNamespace elements associated with resource property value-
1424 change notification are described as follows:

- 1425 1. The WS-Resource's resource properties document MAY be defined using resource
1426 properties declared in multiple XML namespaces. For each of these XML namespaces, an
1427 associated TopicNamespace element MUST be defined. The TopicNamespace element
1428 defines a namespace intended to contain topics related to value changes of resource
1429 properties declared in that XML namespace.
 - 1430 o The value of the TopicNamespace element's targetNamespace attribute MUST be
1431 the same as the URI of the namespace in which the resource property element is

- 1432 defined. The name attribute of the TopicNamespace element SHOULD have the
 1433 value "ResourcePropertiesTopicNamespace".
- 1434 2. For each resource property participating in the value-change notification pattern, a
 1435 TopicExpression element MUST be defined as a child of the TopicNamespace element
 1436 defined in 1.
- 1437 o Notification messages reflecting changes to the resource property are associated
 1438 with this TopicExpression.
- 1439 o The value of the TopicExpression element's name attribute MUST be the same as
 1440 the NCName of the resource property element.
- 1441 o The value of the TopicExpression element's messageTypes attribute MUST include
 1442 wsrf-rp:ResourcePropertyValueChangeNotification (defined later in this section). In
 1443 addition, it MAY include QNames of other message elements.
- 1444 o A designer MAY introduce additional child sub-topic elements to the TopicExpression
 1445 element that represent application-specific needs.
- 1446 3. The WS-Resource acting as the NotificationProducer MUST include TopicExpressions as
 1447 defined in 2 above, as part of the value of its "wsnt:TopicExpression" resource property
 1448 element. One such TopicExpression MUST be included for each resource property element
 1449 offered as a target for a value-change subscription.
- 1450 4. When a WS-Resource observes a resource property value change, it SHOULD create a
 1451 notification message that expresses the situation, and associate the notification message
 1452 with the TopicExpression associated with that resource property. Note: there are many
 1453 circumstances in which a change to a resource property might not result in the generation of
 1454 a notification message. For example, a resource property value may change frequently,
 1455 making generation of notification messages too expensive for the service. In this situation, a
 1456 WS-Resource may choose to never generate notification message artifacts to record value
 1457 change, or it may choose to generate notification message artifacts for a subset of the
 1458 value-change situations.

1459 The wsrf-rp:ResourcePropertyValueChangeNotification element MUST appear as a component
 1460 of the notification message associated with resource property value change topics. This element
 1461 is defined as follows:

```
<wsrf-rp:ResourcePropertyValueChangeNotification>
  <wsrf-rp:OldValues> xsd:any *</wsrf-rp:OldValues>?
  <wsrf-rp>NewValues> xsd:any *</wsrf-rp>NewValues>
</wsrf-rp:ResourcePropertyValueChangeNotification>
```

1466 This element may appear as the root element of the notification message, or it may appear as a
 1467 descendent of the root, accommodating patterns where the notification message itself is
 1468 contained in an enveloping mechanism. The form of the
 1469 ResourcePropertyValueChangeNotification is further constrained as follows:

1470 /wsrf-rp:ResourcePropertyValueChangeNotification
 1471 One ResourcePropertyValueChangeNotification element is created for each resource
 1472 property value-change situation detected and acted upon by the WS-Resource. This
 1473 component records the value change of the affected resource property.

1474 /wsrf-rp:ResourcePropertyValueChangeNotification/OldValues
 1475 This element, if it appears, MUST contain the resource property elements of the affected
 1476 WS-Resource property immediately prior to when the value change was applied. If the

1477 resource property did not have any value prior to the value change (for example, this
1478 notification represents an insertion of a new resource property element) then this element
1479 is empty and will contain the attribute xsi:nil with value “true”. If this component does not
1480 appear in the message, then the WS-Resource was unable or unwilling to record the
1481 resource property elements prior to the value change.

1482 /wsrf-rp:ResourcePropertyValueChangeNotification/NewValues

1483 This element MUST contain the resource property elements of the affected WS-Resource
1484 property after the value-change condition was detected. If the WS-Resource property
1485 does not have any value after the value change (for example, this notification represents
1486 a deletion of the resource property element) then this element is empty and will contain
1487 the attribute xsi:nil with value “true”.

1488 **6.2 Value Changes on Any Resource Property**

1489 In addition to the TopicExpressions defined for value-change notification to individual resource
1490 properties (described in the previous section), the WS-Resource MAY also support subscription
1491 for changes to *any* resource property. This specification defines a distinguished topic, named
1492 “AnyResourcePropertyValueChange” in a distinguished Topic Namespace corresponding to the
1493 WS-ResourceProperties specification namespace.

1494 If the WS-Resource supports the NotificationProducer interface (as defined by WS-
1495 BaseNotification) and it supports subscriptions on the wsrf-rp:AnyResourcePropertyValueChange
1496 topic, then it MUST include this TopicExpression’s QName in the value of its
1497 wsnt:TopicExpression resource property. Furthermore, for any ResourcePropertyValueChange
1498 notification message published on any Topic, the WS-Resource MUST also publish the
1499 notification message on the wsrf-rp:AnyResourcePropertyValueChange Topic.

1500 **7 ACID Properties of Operations on WS-**
1501 **Resources**

1502 The ability to associate a transactional recovery policy to the execution of a Web service
1503 message exchange is a quality of service the designer would compose into the definition of a
1504 WS-Resource. In the presence of a transactional unit of work, a Web service capable of
1505 participating in the transactional protocol must abide by the rules of two-phase-commit
1506 transaction management. However, in the absence of a transaction management policy, the Web
1507 service is under no obligation to recover the state of the WS-Resource in the event of a failure
1508 during message processing.

1509 This specification is not prescriptive with respect to policy that governs concurrent read or write
1510 access to a WS-Resource. The definition of specific policy governing concurrent updates,
1511 whether or not separate message executions targeting the same WS-Resource may be
1512 interleaved, and whether partially-completed WS-Resource updates within a given message
1513 execution may be observed by other concurrent requests is beyond the scope of this definition.
1514 The scope and extent of the isolation of changes made to the WS-Resource is an implementation
1515 dependent responsibility of the WS-Resource itself. The WS-Resource must also take on the
1516 responsibility for the scope and extent to which notifications of changes to the WS-Resource are
1517 isolated and made observable. If WS-Resource update isolation is needed, we suggest the use of
1518 a transaction to provide a context within which isolation of WS-Resource updates can be
1519 provided. In the absence of a transactional unit of work, the level of WS-Resource update
1520 atomicity, recovery, isolation, and durability provided is implementation-dependent.
1521 The ability to declare and attach isolation-level policy to the definition of a Web service message
1522 exchange, whether or not a transactional unit of work is present, represents a general
1523 requirement not met by the current Web service architecture. In the future, isolation-level policy
1524 declarations may be introduced as a formal part of the WS-Resource definition.

1525 8 Security Considerations

1526 This specification defines the resource properties document and also the set of message
1527 exchanges that MUST be supported by a WS-Resource. In this context, there are two categories
1528 of security aspects that need to be considered: (a) securing the message exchanges and (b)
1529 securing the resource properties.

1530 8.1 Securing the message exchanges

1531 When messages are exchanged between a requestor and a WS-Resource in order to access or
1532 act upon one or more resource properties, it is RECOMMENDED that the communication
1533 between the services be secured using the mechanisms described in WS-Security [[WS-Security](#)].

1534 8.2 Securing Resource Properties

1535 Since WS-ResourceProperties defines a mechanism to expose properties of a WS-Resource,
1536 security policies should be established that ensure that only authorized requestors can access
1537 the value of a resource property. In order to secure access to the resource properties, the
1538 message exchanges that provide the access should be appropriately controlled. Authorization
1539 policies should be put in place so that the implications of providing the state information (through
1540 GetResourceProperty, GetMultipleResourceProperties, GetResourcePropertyDocument, or
1541 QueryResourceProperties messages or through notification of value change and modification of
1542 the resource properties), are taken into account. These policies should also take into account the
1543 semantic difference between components of the SetResourceProperties message – i.e. that an
1544 Update component updates a *value* of a resource property, whereas Insert and Delete
1545 components modify whether the WS-Resource actually *contains* the resource property values.

1546 The authorization policies may also reflect the sensitivity of the resource property(ies) that are
1547 accessible from a WS-Resource. Policies can be set at the coarse granularity of the message
1548 exchange (e.g., Get(Multiple)ResourceProperty(ies) vs SetResourceProperty), but finer-grained
1549 control at the level of individual resource properties may be desired in some scenarios (e.g. user
1550 Bob can access value of “Manufacturer” but not “NumberOfBlocks”).

1551 Given that a requestor will be able to access a resource property value by subscribing to state
1552 changes, care should be taken to set up security policies so that a consistent policy is in effect
1553 irrespective of whether the resource property value is accessed through direct message
1554 exchanges (e.g., GetResourceProperty) or indirectly through subscription for state changes (i.e.,
1555 subscription to “ResourcePropertyValueChangeNotification” topic). It should also be noted that a
1556 requestor will be able to query the value of a property through the QueryResourceProperties
1557 operation, or by using a domain-specific operation corresponding to a resource property (e.g.,
1558 getNumberOfBlocks) if one exists. Therefore, the authorization policy on
1559 QueryResourceProperties operation (and the getXXX operation, if one is declared on the Web
1560 service for resource property named XXX) should be set so that a requestor who is not
1561 authorized to get a value of a resource property through a GetResourceProperty request is not
1562 able to deduce the value indirectly through the QueryResourceProperties request (or the getXXX
1563 operation on the Web service).

1564 Even if the requestor is authorized to access the requested resource properties, it is
1565 RECOMMENDED that the resource properties that are exchanged between a requestor and a
1566 Web service are secured to ensure integrity and/or confidentiality of the resource property values.
1567 This will prevent unauthorized alteration of and/or access to the property values while in transit.
1568 This would mean that the specific resource property elements are signed and/or encrypted within
1569 the message by leveraging WS-Security as discussed in the previous section.

Appendix A. Acknowledgments

1598 Special thanks to the Global Grid Forum's Open Grid Services Infrastructure working group,
1599 which defined the OGSI v1.0 [[OGSI](#)] specification which was a large inspiration for the ideas
1600 expressed in this specification.

1601 The following individuals were members of the committee during the development of this
1602 specification:

1603 Mario Antonioletti (EPCC, The University of Edinburgh), Akhil Arora (Sun Microsystems), Tim
1604 Banks (IBM), Jeff Bohren (OpenNetwork), Fred Carter (AmberPoint), Martin Chapman (Oracle),
1605 Glen Daniels (Sonic Software), David De Roure (University of Southampton), Thomas Freund
1606 (IBM), John Fuller (Individual), Stephen Graham (IBM), Anish Karmarkar (Oracle), Hideharu Kato
1607 (Hitachi), David Levine (IBM), Paul Lipton (Computer Associates), Mark Little (Arjuna
1608 Technologies Limited), Lily Liu (WebMethods, Inc.), Tom Maguire (IBM), Susan Malaika (IBM),
1609 Mark Mc Keown (University of Manchester), David Martin (IBM), Samuel Meder (Argonne
1610 National Laboratory), Jeff Mischkinsky (Oracle), Roger Menday (Forschungszentrum Jlich
1611 GmbH), Bryan Murray (Hewlett-Packard), Mark Peel (Novell), Alain Regnier (Ricoh Company,
1612 Ltd.), Ian Robinson (IBM), Tom Rutt (Fujitsu), Mitsunori Satomi (Hitachi), Igor Sedukhin
1613 (Computer Associates), Hitoshi Sekine (Ricoh Company, Ltd.), Frank Siebenlist (Argonne
1614 National Laboratory), Alex Sim (Lawrence Berkeley National Laboratory), David Snelling (Fujitsu),
1615 Latha Srinivasan (Hewlett-Packard), Rich Thompson (IBM), Jem Treadwell (Hewlett-Packard),
1616 Steve Tuecke (Argonne National Laboratory), William Vambenepe (Hewlett-Packard), Katy Warr
1617 (IBM), Alan Weissberger (NEC Corporation), Pete Wenzel (SeeBeyond Technology Corporation),
1618 Kirk Wilson (Computer Associates) and Umit Yalcinalp (SAP).

1619 In addition, the following people made contributions to this specification:

1620 Nick Butler (IBM), Karl Czajkowski (Globus / USC/ISI), Andrew Eisenberg (IBM), Donald F
1621 Ferguson (IBM), Ian Foster (Globus / Argonne), Jeffrey Frey (IBM), Diane Jordan (IBM), Frank
1622 Leymann (IBM), Andreas Meier (IBM), Nataraj Nagaratnam (IBM), Martin Nally (IBM), John
1623 Rofrano (IBM), Ellen Stokes (IBM), Tony Storey (IBM), Jay Unger (IBM), Sanjiva Weerawarana
1624 (IBM).

1625 Appendix B. XML Schema

1626 The XML types and elements used in this specification are included here for convenience. The
1627 authoritative version of this schema document is available at

Appendix D. Revision History

Rev	Date	By Whom	What
wd-01	2004-05-18	Steve Graham	Initial version created from submission by contributing companies. Minor modifications made to reflect OASIS formatting and the following issues: WSRF2, WSRF3, WSRF14, WSRF33.
wd-02	2004-05-31	Steve Graham, Jem Treadwell	Mods to draft 01, including hyphenation, clarification of acknowledgements section
wd-03	2004-06-04	Steve Graham	Reformat rogue Veranda text with Arial.
wd-04	2004-06-07	Steve Graham	Base faults comment on faults (align with ResourceLifetime), update date URIs to 2004/06, update URLs in references to point to .pdfs, update Acknowledgements
wd-05	2004-07-19	Jem Treadwell	Changed [State Paper] & [WS-Notification] references to public URLs.
wd-06 (wd-05.b)	2004-09-17	Steve Graham	WSRF15, WSRF16, WSRF21
wd-05.c	2004-11-22	Jem Treadwell Steve Graham	Confirm WSRF15. WSRF16, WSRF21, fix up some small typos (Jem), verify typos fixes are correct and reversion to 05.c (sgg)
wd-05.d	2004-11-22	Steve Graham	Incorporate Chairman's editorial modifications (from Ian Robinson) on Title page, namespace URIs and References section. Incorporate changes due to adoption of WS-Resource specification. Addresses: WSRF4, WSRF24, WSRF27, WSRF30, WSRF43, WSRF49, WSRF53, WSRF56
wd-05.e	2004-11-26	Ian Robinson	Handful of typos corrected.
wd-05	2004-11-30	Steve Graham	Final typos accepted, PDF generated.
wd-06.a	2005-02-18	Steve Graham	WSRF25, WSRF51, WSRF55, WSRF62, WSRF63, WSRF68, WSRF72, WSRF79, WSRF81, WSRF83, WSRF86, WSRF93, WSRF95, WSRF96

Rev	Date	By Whom	What
wd-06.b	2005-02-25	Jem Treadwell	Few minor typos etc. corrected.
wd-06.c	2005-03-07	Jem Treadwell	Updated wsa namespace reference.
wd-06.d	2005-03-24	Ian Robinson	Added ResourcePropertyChangeFailure type to schema
wd-07.a	2005-05-16	Steve Graham	91, 92 (no changes required), 97, 98, 99, 101, 102, 103
wd-07.c	2005-05-17	Steve Graham	100, 109
wd-07.d	2005-05-17	Steve Graham	113
wd-07.e	2005-05-18	Steve Graham	Updates to 114, per Ian Robinson and F2F discussion.
wd-07.f	2005-05-18	Steve Graham	WSRF 91,97,99,100,101,102, 103
wd-07.g	2005-06-10	Steve Graham	Minor typos as reported by Hideharu Kato, a few additional related typos, update references to WS-Notification, update Acknowledgements.

pr-02.c	2006-01-11	Ian Robinson	Fixed wsnt namespace reference

2470 **Appendix E. Notices**

2471 OASIS takes no position regarding the validity or scope of any intellectual property or other rights
2472 that might be claimed to pertain to the implementation or use of the technology described in this
2473 document or the extent to which any license under such rights might or might not be available;
2474 neither does it represent that it has made any effort to identify any such rights. Information on
2475 OASIS's procedures with respect to rights in OASIS specifications can be found at the OASIS
2476 website. Copies of claims of rights made available for publication and any assurances of licenses
2477 to be made available, or the result of an attempt made to obtain a general license or permission
2478 for the use of such proprietary rights by implementors or users of this specification, can be
2479 obtained from the OASIS Executive Director.

2480

2481 OASIS invites any interested party to bring to its attention any copyrights, patents or patent
2482 applications, or other proprietary rights which may cover technology that may be required to
2483 implement this specification. Please address the information to the OASIS Executive Director.

2484

2485 Copyright (C) OASIS Open (2005). All Rights Reserved.

2486

2487 This document and translations of it may be copied and furnished to others, and derivative works
2488 that comment on or otherwise explain it or assist in its implementation may be prepared, copied,
2489 published and distributed, in whole or in part, without restriction of any kind, provided that the
2490 above copyright notice and this paragraph are included on all such copies and derivative works.
2491 However, this document itself may not be modified in any way, such as by removing the copyright
2492 notice or references to OASIS, except as needed for the purpose of developing OASIS
2493 specifications, in which case the procedures for copyrights defined in the OASIS Intellectual
2494 Property Rights document must be followed, or as required to translate it into languages other
2495 than English.

2496

2497 The limited permissions granted above are perpetual and will not be revoked by OASIS or its
2498 successors or assigns.
