INFRASTRUCTURE MASONS

Consider working in **digital infrastructure, designing, building and operating the physical and logical foundations of the digital age.**

We need fresh minds to write code, manage logistics, negotiate contracts, manage massive construction projects, pull cable, install and maintain IT equipment – in short, to do what it takes to enable the internet of everything.

We need people of all education levels and majors, ranging from a high/secondary school diploma to under/postgraduate degrees.

Infrastructure Masons is a professional association of the builders of the digital age. Our members built and operate the internet and the world-wide web, and … we have a problem. We can't find the people we need to maintain the rate of growth society expects of us. So, to encourage students to come toward our industry, and to encourage schools to offer the training and education to prepare students to be successful in our industry, we're offering scholarships to students in or entering certain digital infrastructure-specific training and education programs, including at least one at your school!

We plan to award 50% of our scholarships to women.

So, women are encouraged to apply.

To learn more about the eligible program offered at your school contact:
