

# Barracuda Site Security Scanner

An easy-to-use, free tool that enables MSPs to provide real-time security scans for their customers and prospective customers. This lightweight tool identifies vulnerabilities, making it easy for you to start cybersecurity conversations, showcase the value you offer, and create sales opportunities.

In today's competitive market, MSPs must establish their unique advantages upfront in order to drive new sales and client relationships. Barracuda Site Security Scanner allows you to do this, using a powerful tool purpose-built to help you differentiate yourself from the competition while driving your security service growth forward.

## Promote cybersecurity with ease

Once the tool is downloaded to one of the devices within a site, it will detect other connected devices, site accounts, and domain policies to check for vulnerabilities. The scan results detail the vulnerabilities found, empowering you to discuss how they can be addressed, with concrete data to illustrate your customers' security posture.

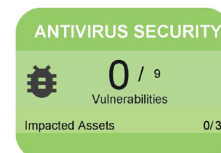

## Add value in every conversation

The reports generated by the scanner are brandable, making them a true asset for you as the MSP. The report includes the results of the scan, explanations of the results, as well as how the vulnerabilities can be mitigated, providing MSPs with talking points they need to sell their service offering.

### Site Security Scanner analyzes:

- Antivirus security
- Patch security
- User security
- Network security

### Category Scores
