Implemented metadata elements (only applicable for pillar 2)

The following RDF dictionaries have been defined for central administration:
Ontology: https://eli.gov.pl/resource/ontology/elipl
Dictionary of act types: https://eli.gov.pl/resource/authority/resource-type
Dictionary of the institutions: https://eli.gov.pl/resource/authority/legal-institution
The ontology describes the characteristics of the act and the relationship between acts. Polish ontology was based on the official EU ontology, which it expands with additional data.
The dictionary of act types defines which URIs are identified for each type of act, e.g.
act - http://eli.gov.pl/resource/authority/resource-type/USTAWA
regulations - http://eli.gov.pl/resource/authority/resource-type/ROZP
The dictionary of the institutions is used to identify institutions that are associated with files (e. g. issuing authority, obligated authority).
Examples of institution identifiers:
Sejm - http://eli.gov.pl/resource/authority/legal-institution/SEJM1
President - https://eli.gov.pl/resource/authority/resource-type1
