

Delivering Labcorp data and insights at the point of care

Labcorp Diagnostic Assistant™ delivers patient-centric Labcorp data and insights directly to the point of care. Embedded within the electronic health record (EHR), Labcorp Diagnostic Assistant provides the most complete view of a patient's lab results history while delivering actionable evidence-based guidelines and lab-based clinical insights to facilitate informed clinical decision-making and improved patient care.

Labcorp Diagnostic Assistant combines a patient's EHR data with Labcorp test results that were ordered from outside of the clinician's organization, giving clinicians real-time patient-level access to Labcorp's unified data platform that includes lab results for approximately 50% of the United States population.

Enhancing the provider experience and improving patient outcomes for specialists

Improved lab visualizations over time for specialty specific conditions.

Improve continuity and quality of care:

- Provide more data to your entire care team (primary care providers, nurses, specialists and pharmacists)
- Lower costs and improve patient satisfaction by avoiding duplication of testing

Increase efficiencies for providers and staff:

- Save time with referred patients by synthesizing relevant information in their workflows
- Trend consolidated lab results in a few clicks
- Assess labs in correlation to encounters, procedures and medications in a single view

Intuitive results experience featuring data visualization, search, trend and filter capabilities with access to results PDF.

Guideline-based, patient specific lab interpretations developed by leading experts at the point of care.

Supported EHRs include Epic, eClinicalWorks, Athena, Cerner and NextGen.
