

# Software Eats the (Commons/Public Licensing) World (It Should!)

Mike Linksvayer (@mlinksva)

Linux Foundation Collaboration Summit

San Francisco

2013-04-16

(a trope)

**“My theory is that we are in the middle of a dramatic and broad technological and economic shift in which software companies are poised to take over large swathes of the economy.”**

By MARC ANDREESSEN

This week, Hewlett-Packard (where I am on the board) announced that it is exploring jettisoning its struggling PC business in favor of investing more heavily in software, where it sees better potential for growth. Meanwhile, Google plans to buy up the cellphone handset market. Mobility. Both moves surprised the tech world. But both moves are also in line with a trend I've observed, one that makes me optimistic about the future growth of the American and world economies, despite the recent turmoil in the stock market.

In short, software is eating the world.

More than 10 years after the peak of the 1990s dot-com bubble, a dozen or so new Internet companies like Facebook and Twitter are sparking controversy in Silicon Valley, due to their rapidly growing private market valuations, and even

**Bruce D'Arcus** · 3 days ago

Jason - when you say "What I learned was that my next project had to have open at its core, rather than just tacked onto the side," what do you mean by the term "open" here? Last I looked, PeerJ is based on proprietary code. If that's right, isn't your business model closer to Mendeley than this post suggests?

I'm not trolling; a serious question. I really want to see open access innovation in my field. But I'm not sure I see that happening without it being based on open source code, which then allows experiments on different sorts of business models for different fields (philosophy would seem rather different than biology, for example), and so forth.

Bruce -

1. Mendeley was in a tight spot using other publisher's material. We had to tread carefully with product development because of that. The proprietary nature of the Mendeley software wasn't blocking my ability to build new features, it was restrictions to the use of content. In contrast, PeerJ is an Open Access publisher, which means the content is freely available to all to remix and use under a CC-BY 3.0 license. This is what is meant by "open." I don't need to be worried about a publisher getting angry at me for distributing content and neither does anyone else.

2. PeerJ is already open sourcing our code frequently at <https://github.com/PeerJ/> if you're interested. Then there is OJS and Annotum for other solutions to experimenting with publishing. That said, a lack of open source publishing options is not what is holding back Open Access, so I disagree there.

## My thoughts on Mendeley/Elsevier & why I left to start PeerJ

2013-04-09

1337biz 1 day ago | [link](#)

I don't get it. It was absolutely clear that they were using a proprietary software owned by a for-profit company.

There are perfectly viable alternatives, Open Source and free to use e.g. Zotero et al.

[reply](#)

mjn 1 day ago | [link](#)

While true, it seemed like a fairly pro-openness company, which not only said the right things but seemed to have a lot of employees genuinely committed to improving the state of academic literature.

But it does add another example of why we should be wary of even well-meaning for-profit companies, without some kind of more solid guarantee that they won't sell out in the future. For stuff like this, either a nonprofit foundation, or at least a forkable open-source version of the platform, seem like necessary prerequisites if you want to ensure that Elsevier-and-co can't buy it out. I guess a company 100%-owned by a strong open-culture advocate could be reliable also, but it gets more complex when investors are in the mix.

Also a reason I don't trust academia.edu compared to, say, the arXiv.

Wednesday, April 10 2013

This is the problem with relying on software as a service. To ensure openness you can't just put your faith in a single company, Mendeley, Google, whatever. We need distributed tools and open protocols. If all your data is on one company's servers you are vulnerable. It is reminiscent of the recent Google Reader controversy. If you're looking for solutions to the fundamental problem in such situations you need two things.

1. All the software needs to be open source (or at least have open versions available) so that it can't be "taken away" by a single company or individual.
2. Anyone should be able to install their own server and have that server and their client be able to talk to other servers/clients.

This is why email is so great.

Remember these abuses if you are a Dropbox, Facebook, Google or Twitter user. What happens when the company gets taken over by someone "evil" or the company simply decides that profits trump its "products" i.e. you.

## A HANDY GUIDE TO **CREATIVE COMMONS**

Nobody can do anything with your work without first getting your express, written permission, if you can afford to sue them.

Everybody can freely download and share your work without modifying it, which they'd be able to do anyway since you can't afford to sue them.

Everybody can do whatever they want with your work as long as it's not commercial (whatever that legally means), if you can afford to sue them.

Everybody can do whatever they want with your work, as long as they don't stop people from doing stuff with their work, if you can afford to sue them.

Everybody can do whatever they want with your work as long as they give you credit, if you can afford to sue them.

Screw it. Just use this one and save everybody the headache. People are probably just going to do whatever they want anyway.

**(software-centric licenses,  
new/versioned)**

## European Union Public Licence

v. 1.12

EUPL © the European ~~Community-Union~~ 2007, 2012

This European Union Public Licence (the “EUPL”) applies to the Work ~~or Software~~ (as defined below) which is provided under the terms of this Licence. Any use of the Work, other than as authorised under this Licence is prohibited (to the extent such use is covered by a right of the copyright holder of the Work).

The Original Work is provided under the terms of this Licence when the Licensor (as defined below) has placed the following notice immediately following the copyright notice for the Original Work:

*Licensed under the ~~EUPL v.1.1~~*

or has expressed by any other means his willingness to license under the EUPL.

### **1. Definitions**

In this Licence, the following terms have the following meaning:

- *The Licence*: this Licence.

- *The Original Work*: ~~or the Software~~: the work or software distributed and/or communicated by the Licensor under this Licence, available as Source Code and also as Executable Code as the case may be.

# (allow referring to copy of license)

copyleft-next 0.2.1 ("this License")  
Release date: 2013-03-12

## 1. License Grants

Subject to the terms of this License, I grant You:

- a) A non-exclusive, worldwide, perpetual, royalty-free, irrevocable copyright license, to reproduce, Distribute, prepare derivative works of, publicly perform and publicly display My Work.
- b) A non-exclusive, worldwide, perpetual, royalty-free, irrevocable patent license under Licensed Patents to make, have made, use, sell, offer for sale, and import Covered Works.

This License does not grant any rights in My name, trademarks, service marks, or logos.

## 2. Nullification of Copyleft/Proprietary Dual Licensing

If I offer to license, for a fee, a Covered Work under terms other than a license approved by the Open Source Initiative, a license classified as 'free' by the Free Software Foundation, or a numbered version of copyleft-next released by the Copyleft-Next Project, then sections 3 through 6 of this License cease to apply to My Work.

## 3. Distribution: General Conditions

You may Distribute Covered Works, provided that You (i) **inform recipients how they can obtain a copy of this License**; (ii) satisfy the applicable conditions of sections 4 through 7; and (iii) preserve all Legal Notices contained in My Work (to the extent they remain pertinent). "Legal Notices" means copyright notices, license notices, license texts, and author attributions, but does not include logos, other graphical images, trademarks or trademark legends.

# (address all default restrictions)

“This License” refers to version 3 of the GNU General Public License.

“Copyright” also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

i

**1. Copyright and Related Rights.** A Work made available under CC0 may be protected by copyright and related or neighboring rights ("Copyright and Related Rights"). Copyright and Related Rights include, but are not limited to, the following:

- i. the right to reproduce, adapt, distribute, perform, display, communicate, and translate a Work;
- ii. moral rights retained by the original author(s) and/or performer(s);
- iii. publicity and privacy rights pertaining to a person's image or likeness depicted in a Work;
- iv. rights protecting against unfair competition in regards to a Work, subject to the limitations in paragraph 4(a), below;
- v. rights protecting the extraction, dissemination, use and reuse of data in a Work;
- vi. database rights (such as those arising under Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases, and under any national implementation thereof, including any amended or successor version of such directive); and
- vii. other similar, equivalent or corresponding rights throughout the world based on applicable law or treaty, and any national implementations thereof.

## Proposed License - Hacked Apache 2.0

Ad

Andrew Katz — Wed 07 Mar 2012 05:27:02 AM PST

Dear All

Sorry for launching myself into the list like this, but hello, everybody!

Here's a link to a licence I've been working on and I'd like to propose as a conformant licence. It's intended for open hardware, but can equally be used for software (the eagle-eyed will note that it bears an uncanny resemblance to the Apache 2.0 license).

<http://solderpad.org/licenses/SHL-0.5/>

The backstory is this: I've been working with a number of open hardware projects, and I'm slowly coming to the conclusion that a permissive licence makes more sense than a copyleft licence. The only two licences currently proposed for covering open hardware are the TAPR and CERN licences, both of which have a copyleft element. I posited the idea of using Apache as a base, and taking a look at it, it is remarkably simple to convert it to cover hardware.

**[I'm fairly critical of this particular proposal, but contains some good pointers, see <http://web.archiveorange.com/archive/v/EfptdcGQLun4IRPG95vz>]**

**(reformation)**

**is here-coming: be crushed or leverage**

**translate and justify forced sharing  
(copyleft) as policy**

**knowledge commoners of all domains  
are needed**

**(imagine a world in which FLOSS and  
Wikipedia are not unusual)**

**where mass collaboration obtains...**

**disruptive innovation**

**superior “product”**

**greater equality**

**greater freedom**

**...in all of the most crucial human  
enterprises**

**links:** convey yourself to
