## **1 Introduction**

The supplementary materials provide additional experiment. The details of comparison can be found in the body of submitted paper.

## List of Figures

1	Comparison of accuracy of recovered shape. Rows from top to bottom, (a): input images; (b): Reconstruction result based on feature points [1]; (c): reconstruction of proposed approach; . . . . .	4
2	Comparison of robustness of proposed approach against pose variation. Columns (from left to right) show: (a) input images; (b) Novel pose by the method in[4] based on feature points; (c) Novel pose by the method in[4] based on the proposed approach. . . . .	6
3	Comparison of robustness of illumination model to lighting. Columns (from left to right) show: (a) input images; (b) fitting results given by Phong's model [3]; (c) fitting results given by the proposed approach without specular reflectance [2]; (d) fitting results given by the proposed approach. . . . .	7
4	Comparison of the accuracy of shapes recovered from the first 11 frontal pose input in Fig. 3. Columns (from left to right) show: (a) novel pose given by Phong's model [3]; (b) novel pose given by the proposed approach without specular reflectance [2]; (c) novel pose given by the proposed approach; (d) contours of (a)(red line), (b)(green line) and (c)(blue line), respectively; (e) and (f) are the magnified details of column (d). . . . .	8
5	Comparison of robustness of illumination model to lighting. Columns (from left to right) show: (a) input images; (b) fitting results given by Phong's model [3]; (c) fitting results given by the proposed approach without specular reflectance [2]; (d) fitting results given by the proposed approach. . . . .	9
6	Comparison of the accuracy of shapes recovered from the first 11 frontal pose inputs in Fig. 5. Columns (from left to right) show: (a) novel pose given by Phong's model [3]; (b) novel pose given by the proposed approach without specular reflectance [2]; (c) novel pose given by the proposed approach; (d) contours of (a)(red line), (b)(green line) and (c)(blue line), respectively; (e) and (f) are the magnified details of column (d). . . . .	10
7	Comparison of robustness of illumination model to lighting. Columns from left to right: (a)input images; (b)fitting results given by the Phong's model [3]; (c)fitting results given by the proposed approach without specular[2]; (d): fitting results given by the proposed approach; . . . . .	12
8	Comparison of inferred frontal view from the 11 profile pose images in Fig. 7. Columns (from left to right) show: (a) inferred frontal view given by Phong's model [3]; (b) inferred frontal view given by the proposed approach without specular reflectance[2]; (c) inferred frontal view given by the proposed approach. . . . .	13
9	Comparison of robustness of illumination model to lighting. Columns from left to right: (a)input images; (b)fitting results given by the Phong's model [3]; (c)fitting results given by the proposed approach without specular[2]; (d): fitting results given by the proposed approach; . . . . .	14

- 
- 10 Comparison of inferred frontal view from the 11 profile pose images in Fig. 9. Columns (from left to right) show: (a) inferred frontal view given by Phong’s model [3]; (b) inferred frontal view given by the proposed approach without specular reflectance[2]; (c) inferred frontal view given by the proposed approach. . . . . 15

## 2 Comparison with the feature points based approach

Here, we provide another comparison between our fitting results and the results based on features points [1].

**Fig. 1** Comparison of accuracy of recovered shape. Rows from top to bottom, (a): input images; (b): Reconstruction result based on feature points [1]; (c): reconstruction of proposed approach;

### **3 New Profile View From Frontal Image**

**Fig. 2** Comparison of robustness of proposed approach against pose variation. Columns (from left to right) show: (a) input images; (b) Novel pose by the method in[4] based on feature points; (c) Novel pose by the method in[4] based on the proposed approach.

**Fig. 3** Comparison of robustness of illumination model to lighting. Columns (from left to right) show: (a) input images; (b) fitting results given by Phong's model [3]; (c) fitting results given by the proposed approach without specular reflectance [2]; (d) fitting results given by the proposed approach.

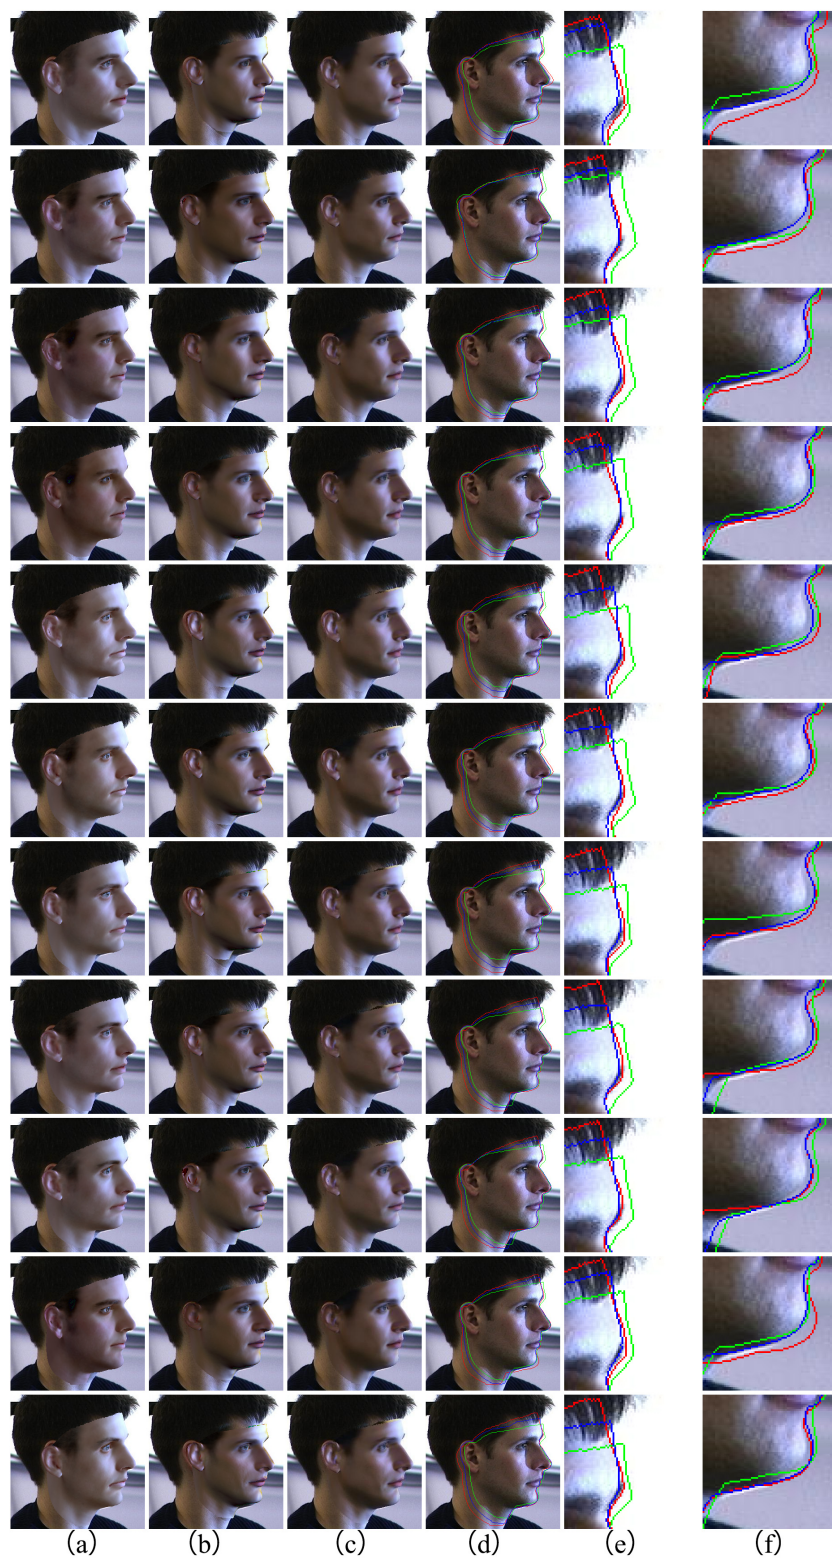

**Fig. 4** Comparison of the accuracy of shapes recovered from the first 11 frontal pose input in Fig. 3. Columns (from left to right) show: (a) novel pose given by Phong's model [3]; (b) novel pose given by the proposed approach without specular reflectance [2]; (c) novel pose given by the proposed approach; (d) contours of (a)(red line), (b)(green line) and (c)(blue line), respectively; (e) and (f) are the magnified details of column (d).

**Fig. 5** Comparison of robustness of illumination model to lighting. Columns (from left to right) show: (a) input images; (b) fitting results given by Phong's model [3]; (c) fitting results given by the proposed approach without specular reflectance [2]; (d) fitting results given by the proposed approach.

**Fig. 6** Comparison of the accuracy of shapes recovered from the first 11 frontal pose inputs in Fig. 5. Columns (from left to right) show: (a) novel pose given by Phong’s model [3]; (b) novel pose given by the proposed approach without specular reflectance [2]; (c) novel pose given by the proposed approach; (d) contours of (a)(red line), (b)(green line) and (c)(blue line), respectively; (e) and (f) are the magnified details of column (d).

#### **4 Inferred Frontal View From Profile Image**

**Fig. 7** Comparison of robustness of illumination model to lighting. Columns from left to right: (a)input images; (b)fitting results given by the Phong's model [3]; (c)fitting results given by the proposed approach without specular[2]; (d): fitting results given by the proposed approach;

**Fig. 8** Comparison of inferred frontal view from the 11 profile pose images in Fig. 7. Columns (from left to right) show: (a) inferred frontal view given by Phong's model [3]; (b) inferred frontal view given by the proposed approach without specular reflectance[2]; (c) inferred frontal view given by the proposed approach.

**Fig. 9** Comparison of robustness of illumination model to lighting. Columns from left to right: (a)input images; (b)fitting results given by the Phong's model [3]; (c)fitting results given by the proposed approach without specular[2]; (d): fitting results given by the proposed approach;

**Fig. 10** Comparison of inferred frontal view from the 11 profile pose images in Fig. 9. Columns (from left to right) show: (a) inferred frontal view given by Phong's model [3]; (b) inferred frontal view given by the proposed approach without specular reflectance[2]; (c) inferred frontal view given by the proposed approach.
