Slido Tech Setup using Switcher

Slido Switcher for Mac or Windows is a free desktop app that allows you to integrate Slido with slides or any other presentation formats such as Prezi, Keynote or PDF. You can **download it** at slido.com/switcher and log in with your Slido credentials.

Present mode

1. Download and **launch Switcher** on the computer connected to the projector.
2. **Sign in** with your Slido account and select your event.
3. Let the Switcher run in the background.
4. **Open your presentation** on the same computer and start presenting.

Admin mode

1. Take out your **secondary device** (phone, tablet or computer) and log in to Slido Admin.
2. Choose the **current event.**
3. Click on the **play icon to activate the poll** and your screen will automatically switch to Slido poll. Click on the **stop icon to deactivate the poll** and continue with your presentation where you left off.
4. For displaying questions, select **Show questions** from the **Switch screen** icon in the top right corner. To go back, click the screen icon again and choose **Show presentation**.

Internet requirements

We recommend a speed of **5 to 10 mbits/s per 100 participants** to ensure a smooth and fast experience. **A LAN cable plugged into the presentation laptop** helps to ensure a stable and uninterrupted connection.

For more help, check Switcher articles in our Help Center.
