Figure 1: Child Hot Car Deaths by Year (1990-2023)

Data Source: Kids and Car Safety Database as of February, 2024, n = 1,085

Since 1990, at least 1,085 children have died in hot cars.

On average, 38 children die in hot cars every year in the U.S.

2018 & 2019 = worst 2 years in history for child hot car deaths

Figure 1b: Child Vehicular Heatstroke Deaths

vs

Child Front Seat Passenger Deaths

Children should never ride in the front seat; they are **MUCH** safer properly restrained in the back seat.

This chart illustrates as we reduced airbag deaths, the number of children dying in hot cars continues to grow.

From 1990-2023, 186 children were killed by over-powered air bags in the front passenger seat. During that same time-frame at least 1,085 children died in hot vehicles. Children can be unknowingly left behind in the back seat by even the most responsible parents and caregivers. Always remember to open the back car door after parking your vehicle and 'Look Before You Lock.'

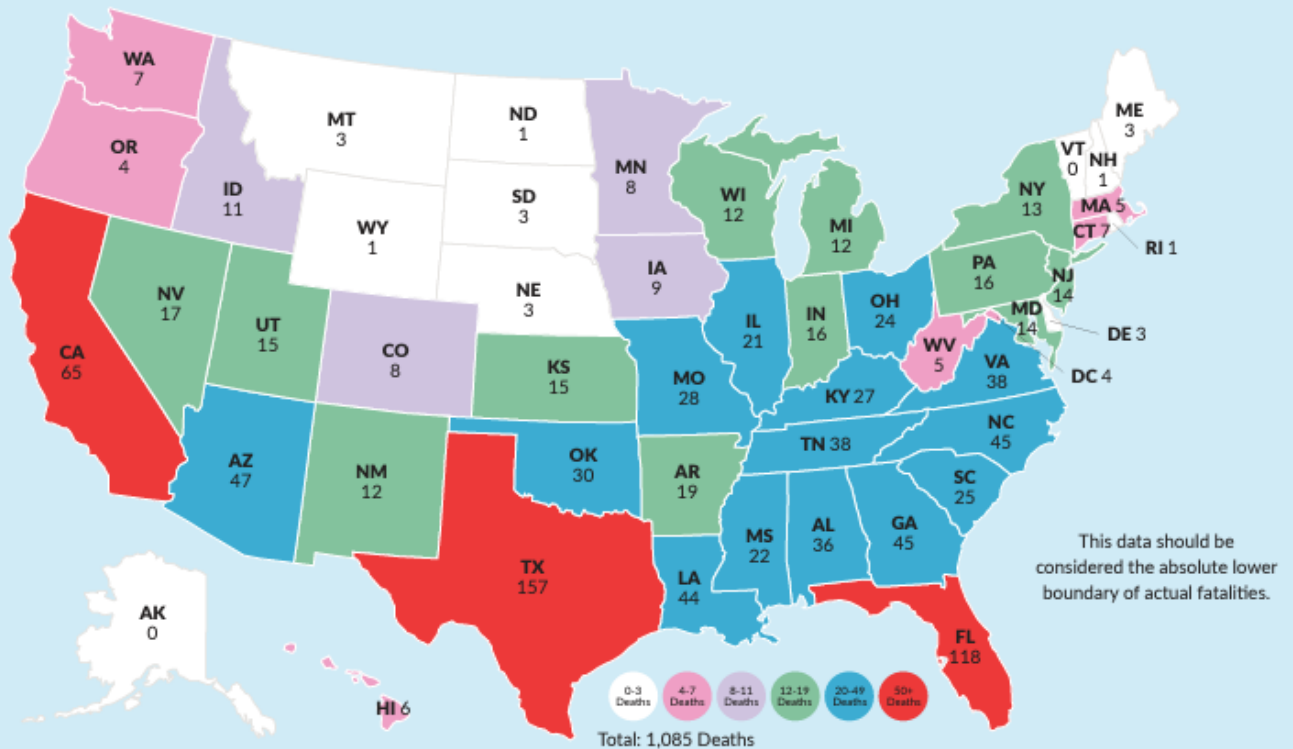

Data Source: Kids and Car Safety Database as of September 2024, n = 1,085

Changes in the way we transport children in vehicles appear to have caused deadly unintended consequences. In the mid-1990's, children were being killed by overpowered airbags, when traveling in the front passenger seat. Safety advocates, government, and the auto industry all worked together to ensure children would ride in the back seat to prevent these unthinkable tragedies.

Unfortunately, no modifications were put in place to compensate for this change. This has resulted in at least 1,085 hot car deaths (compared to approx. 186 child front seat passenger airbag deaths).

The addition of technology to vehicles to end these predictable and preventable hot car deaths is long overdue.

Figure 2: Child Hot Car Deaths (1990-2023) Involving U.S. Children Age 14 and Under

Data Source: KidsAndCarSafety.org as of September, 2024

NOTE: Figure 2a (next page) contains the back of this chart that ranks each state by number of fatalities and provides the date range for when the hot car deaths took place in each state.

Figure 2a: Child Hot Car Deaths (1990-2023)

Total Deaths: 1,085

*There were 72 additional fatalities that Kids and Car Safety was able to document that happened prior to 1990 that are noted in a separate column above.

Data Source: KidsAndCarSafety.org as of September, 2024

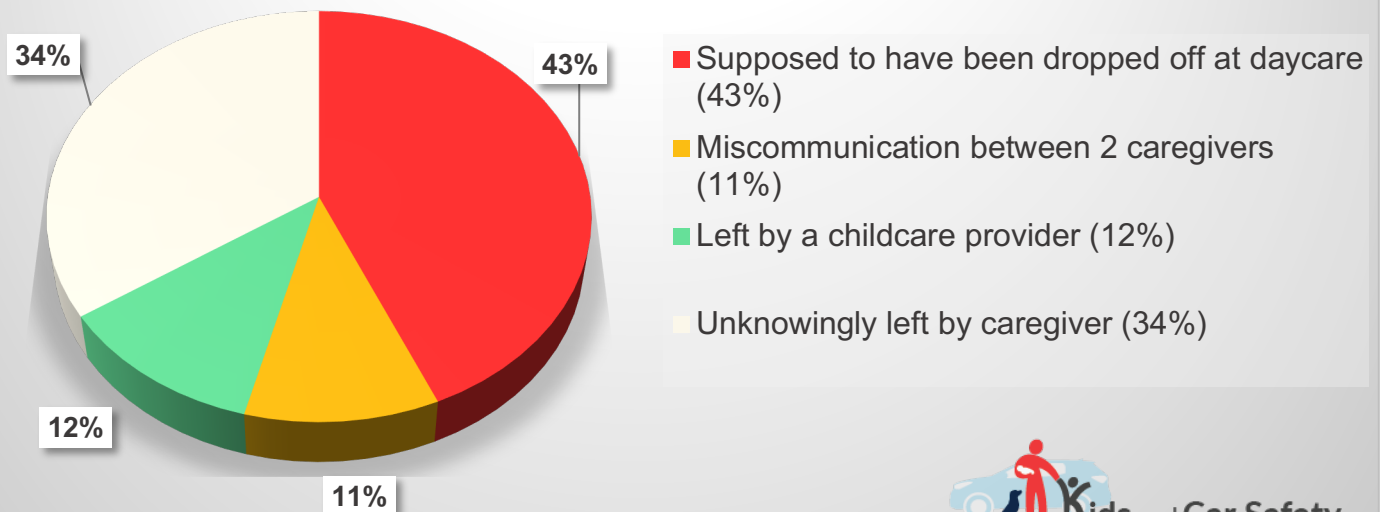

Figure 3: Child Hot Car Deaths by Circumstance (1990-2023)

Data Source: Kids and Car Safety Database as of February, 2024

The overwhelming majority of hot car tragedies involve a child who was unknowingly left or gained access to the vehicle on their own. Contrary to public opinion, very few cases involve drugs, alcohol, prior CPS involvement or neglect.

Figure 11: ALL Child Hot Car Deaths by **Day of Week** (1990-2023)

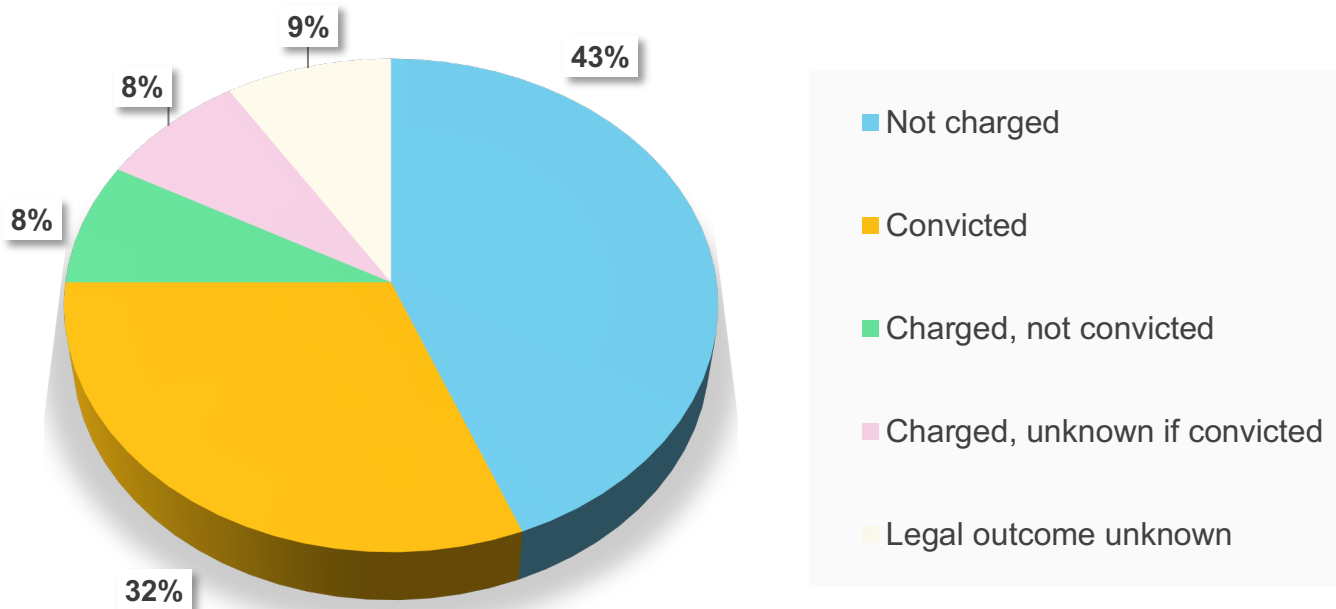

Data Source: Kids and Car Safety Database as of February, 2024, (n = 1,085)

Note: Cases involving children who are unknowingly left happen most frequently during the end of the work week while cases involving children who gain access to vehicles on their own happen most frequently over the weekend.

Note: Unknown legal outcomes are mostly due to court cases that remain open in recent years. Further information is available upon request.

Figure 12: **ALL** Child Hot Car Death Legal Outcomes (1990-2023)

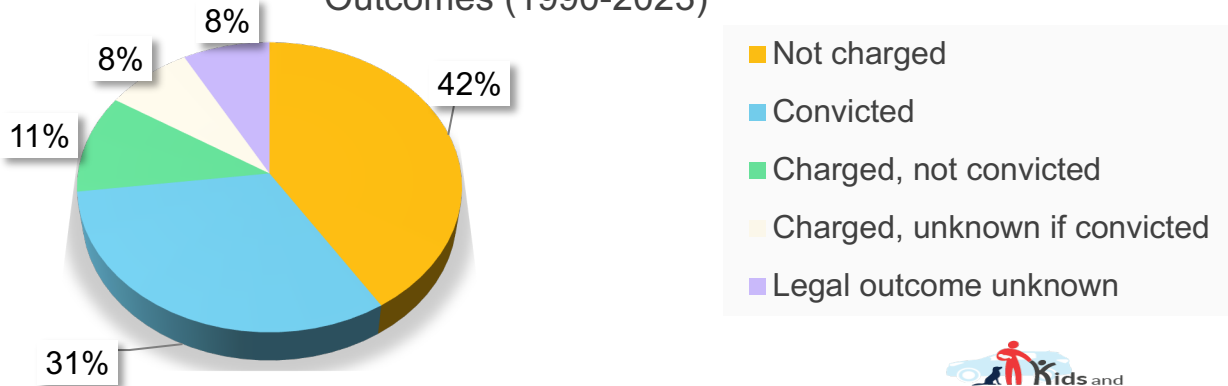

Data Source: Kids and Car Safety Database as of February, 2024, n = 1,085

- 52% of child hot car deaths do not result in a conviction
- 31% of child hot car deaths result in a conviction of varying degrees. Many defendants take a plea deal to avoid the possibility of jail time and because they are unable to fight a legal battle after the tragic loss of a child

The legal outcomes of hot car deaths vary drastically even between cases with nearly identical circumstances. The overwhelming majority of hot car deaths do NOT involve abuse, neglect, prior history with CPS, drugs or alcohol. Criminalizing unintentional acts is not a deterrent for future tragedies. In fact, it serves to further enforce the idea that most parents believe, “this could never happen to me.”
