Risk Manager

Unify and remediate application risk from code to cloud

Problem

Today's application security environment is distributed across teams and infrastructure protected often by as many as 50-60 security tools. Teams do not have a unified way to surface, manage, and remediate risk across their code, cloud and application stack. Organizations' lean security teams struggle to make sense of the thousands of alerts across their applications, lacking context of what matters most and the root cause of issues.

Top Issues in Managing Application Risk:

- **Lack of unified risk visibility from code-to-cloud**
- **No ability to centrally report and measure risk**
- **Difficulty prioritizing issues that matter most across the security stack**
- **Challenges in identifying root cause and origin of risk**
- **Overly complex remediation workflows**

Introducing Veracode Risk Manager

The platform integrates, normalizes, and unifies cross-service context across security tools, applying deep contextual analysis to pre-investigate each issue, determine its root cause and urgency. Veracode Risk Manager then prioritizes remediation recommendations and provides Best Next Actions™ to efficiently reduce the most risk with the least amount of effort. Deployment is fast and agentless, with integrations across various security findings tools, code repositories, cloud environments and more.
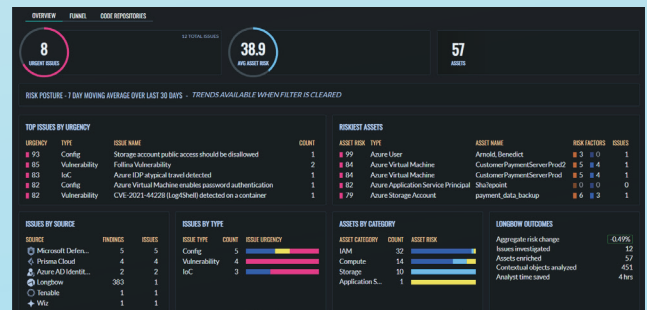

Veracode Risk Manager unifies security findings across development, build, deployment, and production tools, offering risk visibility and remediation from code-to-cloud. Veracode Risk Manager's powerful data visualization and reporting capabilities allow organizations to see through the noise and focus on the most urgent issues and riskiest assets.

Unify and remediate application risk from code to cloud

Risk Manager

Outcomes

10x
Increase in velocity of remediation

75%
Reduction in the time to remediate risk

3mo
Or less to achieve fast ROI

Veracode Risk Manager enables a 10x increase in the velocity of remediation and reduces the time to remediate risk by over 75%. It provides a real-time, data-driven view of risk and urgency, helping organizations manage security risk to the source. The platform's intuitive UI enables analysts to efficiently monitor and measure risk burn down effectively. Customers can achieve a fast ROI in less than three months, with significant productivity gains in issue investigation and remediation.

Veracode Risk Manager Results:

- ✓ Unified, contextualized and prioritized risk visibility

- ✓ Real-time view into application and cloud assets, identifying key control coverage and gaps

- ✓ Accelerated remediation through root cause analysis and precise recommendations

- ✓ Centralized, custom risk remediation dashboard

- ✓ Surfaces the Best Next Actions reducing the most risk with the least amount of effort
